CHS Hospitality Suite: live walkthrough script

Use a phone-sized browser for every step. Tick each box. Write down anything that looks wrong, with the screen name and what you expected. All test accounts use PIN 123456.

Before you start: deploy the latest ZIP, confirm the master switch (Admin → Hotel Controls → Hospitality plans & pilot) is OFF, and have these ready.

Role	Account	Property
Hotel owner	08130000003 (Hotel & Lodge Host)	Savannah Grand Hotel (Test)
Guest	08130000004 (Hotel & Lodge Guest, ₦100,000,000)	same hotel
Event centre owner	08130000001 (Event Centre Host)	Grand Hall (Test) or Royal Garden (Test)
Event client	08130000002 (Event Centre Guest, ₦100,000,000)	same venue
Super admin	your admin login	n/a

A. Hotel owner: setup

☐ Host dashboard opens. "Hotel operations" shows tabs: Housekeeping, Repairs, Money, Menu & stock, Import & sync.

☐ Menu & stock → Menu: add "Jollof rice", category Mains, price 3000, income goes to restaurant. It appears in the list.

☐ Add "Cold beer", Drinks, 1500, bar.

☐ Stock: add "Rice", unit kg, opening quantity 20, reorder at 5, cost 1000. It shows 20 kg.

☐ Menu → Recipe on Jollof rice: 0.5 kg Rice. Save. The line under the item shows "uses 0.5 kg Rice".

☐ Hide "Cold beer", then Show it again.

☐ Assets: add "Generator 20kVA", location Back yard, condition good. Edit it to "fair". The latest history line reads "condition (good → fair)".

☐ "open and share it" link opens the public hotel page: photos, room types with prices, and the menu you just added. Share button works.

B. Guest: ordering

☐ Set-up: guest 08130000004 requests a room at Savannah Grand Hotel for tonight, owner 08130000003 confirms, guest pays from the wallet. Check-in only works on the booking's start date, so make the booking start today.

☐ My Bookings: a guest who is NOT checked in sees no "Order to your room" box.

☐ Owner checks the guest in (Arrivals). Guest refreshes: "Order to your room" appears with the room number.

☐ Order 2 Jollof rice and 3 Cold beer with the note "No pepper". The total shows 10,500. A confirmation appears.

☐ The order is listed under "Your orders" with status placed.

C. Staff: fulfilment and payment

☐ Owner gets a notification "New room order". Menu & stock → Orders shows it with the room, items and note.

☐ Tap Preparing. The guest receives a notification.

☐ Try to pay before delivery: the pay buttons are not shown yet.

☐ Tap Delivered. Pay buttons appear. Stock → Rice now shows 19 kg and the movement list shows "order".

☐ Tap "Paid: transfer". Money tab → income shows 10,500 split: 6,000 restaurant, 4,500 bar.

☐ Sell tab: add 2 Cold beer, method cash, record. Income increases by 3,000 under bar.

☐ Stock: record "Bought / received" 10 kg Rice. Quantity becomes 29.

☐ Drop Rice below its reorder level (record "Used" 25 kg). The owner receives a "Low stock" notification and the item shows "low".

D. Roles

☐ Add a Front desk staff member (My team). Log in as them: they can take orders, record sales and update stock, but the Menu and Assets edit forms are not shown.

☐ The same staff member cannot correct a stock count ("Correct the count" option is missing).

☐ A guest cannot open any staff screen and cannot see another guest's orders.

E. Event centre: quotation

☐ Event owner opens Work → Event day control, expands an event, "Create a quotation".

☐ Add 4 ushers at 5,000 and Decoration at 30,000. Total 50,000. Add payment dates: Deposit 20,000 in 3 days, Balance 30,000 in 7 days. The "Payments add up to" line turns green.

☐ Try a payment date after the event date: the send is refused with a clear message.

☐ Send. The client receives a notification.

☐ Client: My Bookings shows the quotation, total, payment dates and the note that it is paid to the venue directly. Accept it.

☐ Owner: the quotation now says accepted. Mark the deposit received by transfer. Income shows 20,000 under events. The client is notified.

☐ "Withdraw" is no longer offered once a payment is recorded.

F. Plans and the master switch

☐ Admin → Hospitality plans: pilot list shows the limit of 8. Grant a pilot to the hotel owner.

☐ Turn the master switch ON. A host with no plan and no pilot sees Pro tools locked (writes refused with a plain message) but can still read their records.

☐ The pilot host and a paid-plan host keep full access. Event quotations need Business or a pilot.

☐ Turn the switch OFF again before finishing.

G. Calendar and import

☐ Import & sync: upload a small Excel sheet of rooms; the preview appears and nothing is saved until you confirm; undo works.

☐ Copy a room's calendar link and paste it into Google Calendar or Airbnb as an imported calendar.

☐ Link a real Booking.com or Airbnb calendar address and press "Sync now". Report anything other than a clean result. This is the least tested part.

☐ Open the host calendar page for a room with a linked calendar older than an hour: it refreshes by itself.

Report back

For each failed box: the role, screen, what you did, what you saw, and a screenshot. Group them as "blocks the pilot", "annoying" or "later".
