CHS on iPhone: setup and test guide

Final testing round - 18 October 2026. Send this PDF by WhatsApp, flash drive or email.

The short answer

An iPhone cannot install an APK file. That is Apple's rule, not a CHS problem. On iPhone you install CHS from Safari with **Add to Home Screen**. It puts a real CHS icon on the phone and opens full screen with no browser bar. Nothing to download, no file to send except this guide.

The CHS link

https://chic-kitsune-2b3060.netlify.app/

Scan this code with the iPhone camera, or copy the link above (press and hold on it, then Copy) and paste it into Safari.

Setup: 6 steps (about 1 minute)

1	Open the **Safari** app (the blue compass). It must be Safari. Chrome or WhatsApp's own browser will not show the install option on iPhone.
2	Type or paste the link above and open it. Wait until the CHS page has loaded.
3	Tap the **Share** button: a square with an arrow pointing up, at the bottom of the screen (on iPad, at the top).
4	Scroll down the list and tap **Add to Home Screen**. If you do not see it, scroll further or tap 'Edit Actions'.
5	Check the name says **CHS**, then tap **Add** (top right).
6	Close Safari. Open CHS from the new icon on the home screen. Log in with your phone number and 6-digit PIN.

If the link came by WhatsApp

Tapping a link in WhatsApp opens it inside WhatsApp. Press and hold the link, choose **Copy**, open Safari, paste it into the address bar and go. Then follow step 3.

What to test on the iPhone

We are looking for anything that behaves differently on iPhone than on Android. Write down what you see; a screenshot helps (press the side button and volume-up together).

1	**Login and PIN:** log in, log out, log in again. Close the app fully and reopen it: are you still signed in?
2	**Face ID / fingerprint login** (if offered): set it up, log out, log in with it. Note anything that fails.
3	**Bottom menu and More:** every item opens and goes back correctly. The Back swipe from the screen edge works.
4	**Photos and documents:** upload a photo from the camera and one from the photo library on a property listing or an ID form. Does the preview show?
5	**Keyboard:** type in a long form. Does the keyboard hide the field you are typing in? Do amounts and phone fields show the number keypad?
6	**Paying:** in a test account, fund the wallet or pay through the confirm screen. The Paystack page must open and return to CHS afterwards. Use the test accounts only.
7	**Screens:** look for text cut off, buttons under the bottom bar, or the top of the page hidden behind the notch.
8	**Notifications:** do in-app notifications appear? (Phone push alerts on iPhone are limited for home-screen apps; that is Apple's rule.)
9	**Speed:** note any screen that is slow to open or stays blank.

Good to know

- Test accounts show an amber **TEST ACCOUNT** strip on every screen. Use only those for money tests.
- The home-screen app keeps its own login, separate from Safari. Logging in on one does not log in the other.
- To update: open the app and pull down, or close and reopen it. If something looks old, delete the icon (press and hold, Remove App) and add it again from Safari.
- If the page will not open, check the phone has internet and the link has no extra spaces at the end.
- Android phones use the APK as before; this guide is for iPhone only.

Report problems to the CHS team with: phone model, iOS version (Settings > General > About), what you tapped, what you expected, what happened, and a screenshot.
