Rent-to-Own (Mortgage through CHS) test guide

Everything is held by CHS from start to finish: the owner's decision is relayed by admin, the buyer's name and phone are hidden from the owner (shown like "Alex P."), every instalment is held and released by admin, and the final payment is held until the handover completes. Final release is by a super admin only.

Test properties (owner `08120000001`, PIN 123456, both verified and active): "2-Bedroom Flat, Barnawa — Rent to Own" and "3-Bedroom Duplex, Kawo — Rent to Own". Two older sold properties belong to `08050000003`; leave those alone. Buyer: `08120000003` (Demo Round2 Buyer, ID-verified; wallet was ₦81,362,500 when last documented, so check it before you start). Admin and super admin: your own logins.

Screen names are approximate; note any difference.

1. Request and decision

1. Buyer opens the Barnawa listing and sends a rent-to-own request (name, phone, occupation, source of funds, address). Expected: status waiting for admin relay. Unverified identity is refused.
2. Admin relays the request. The owner sees it with the buyer shown only as a short name. No phone or address.
3. Owner approves (or declines with a reason, which is relayed back by admin). Expected: buyer is told; on approval the agreement moves to owner approved, then active once started.

2. Instalments (held by CHS)

1. Buyer pays any amount towards the agreement. Expected: wallet falls by the amount plus the buyer commission (currently 5.5%), the payment shows as held, nothing reaches the owner.
2. Admin → Rent-to-Own panel shows the pending payment. Admin releases one payment: the owner receives it less the seller commission (currently 4.5%). Test "release all" too.
3. Check the commission figures by hand on a small payment. Write the numbers down.
4. Pay a very small amount and an amount above what remains: both should be handled with a clear message.

3. Final payment and handover

1. Buyer makes the payment that completes the price. Expected: that final payment is held and the agreement moves to awaiting handover. It is NOT released.
2. Buyer requests the documents (recipient name, address, phone, method, maximum days up to 60).
3. Owner uploads the documents. Admin reviews: approve, or request changes with a note (test both). Owner sees the note.
4. Owner marks the documents sent with the method, tracking and proof. Buyer confirms receipt.
5. Super admin releases the final payment. A normal admin cannot. Expected: owner is paid; agreement completed.
6. Super admin reverts the final release: the money returns to CHS hold. Then release again.
7. Auto release: leave `rto_final_auto_release` OFF during testing. If you tick it, only a super admin can, and it should apply only after the handover completes.

4. Edge cases

- A second buyer requesting the same property while one agreement is active.
- Owner declines after approval: not possible once active.
- Buyer defaults or cancels: check status and what happens to money already held.
- The owner never sees the buyer's phone or contact details at any step, including notifications.
- Timestamps on every step show Lagos time with date and time.

Record

Wallet balances for buyer, owner and CHS before and after each money step, plus a screenshot of any wrong screen. Known gaps to leave out of the pass/fail: due dates, a minimum deposit and an agreement document are not built.
