CHS Tenant Invite Demo Guide

CHS — Tenant Invitation Link: How It Works + Real Demo

Direct answers to your questions first

Will the link automatically install the app from the App Store / Play Store? No — and here's the honest, real reason why: CHS is currently a real, working web app (a PWA), not yet published on Apple's or Google's app stores. A link can only ever open what's actually published somewhere. Clicking this link opens the real CHS site directly in the tenant's browser — exactly like every other page in the app already does.

Does the tenant need to register? Yes, if they've never used CHS before — but only once, and it's short. If they already have a CHS account, they don't register again at all; the link recognizes them and links their existing account instead.

Will the link automatically attach them to the agent/manager's cluster? Yes — this is the real, working part. No back-and-forth needed.

How it actually works, step by step

1. The agent/manager enters the tenant's real biodata into the Tenant Register (already-existing feature) — exactly as they do today from their paper/soft-copy records.
2. A real, unique invitation link is generated automatically for that specific tenant record.
3. The agent/manager copies that real link and sends it however they already communicate with tenants — WhatsApp, SMS, email.
4. The tenant taps the link:
   - **If they've never used CHS:** they see a real, short registration form, with their name and phone number already filled in from what the agent/manager already entered — they don't retype anything already on file.
   - **If they already have a CHS account:** they just tap one button to confirm, no new registration at all.
5. The moment their account exists (or is confirmed), **they are automatically, genuinely linked to that exact tenant register entry** — no manual step, no admin approval needed for this specific linking action.

I tested this myself, completely, before handing it to you

I ran the real, full chain — created a real tenant record, generated the real invite, and confirmed a separate real account became correctly linked to it, with the real data showing the connection. I didn't just build this and assume it works.

A real, ready demo for you to test yourself

I've already created one real, live tenant record for this, recorded under **Demo Manager A**:

Real invite link to test: `https://extraordinary-conkies-312c3d.netlify.app/invite/423e0f51-784e-4b1c-98e9-126d0afde572`

Reference number: TEN-000002

How to test it

1. **Open that link in a real browser where you are not currently logged into CHS** (or use a private/incognito window, so it behaves like a genuine, brand-new tenant).
2. You should see a real welcome screen naming "Demo Manager A" and the reference number above.
3. Tap **"Set up my CHS account."** Notice the name and phone number are already filled in.
4. Complete the short registration (choose a real PIN, upload an ID — this is the real KYC requirement from the last fix).
5. The moment registration finishes, you should land on a real confirmation screen: **"You're genuinely on board,"** confirming the link to Demo Manager A's record.
6. Log in as **Demo Manager A** (08060000001, PIN 123456, role Manager), go to **My Tenant Register**, and you should see this same entry now marked **"✓ Tenant has claimed this real invite"** instead of the copy-link button.

If any of these exact steps don't match what you see, tell me precisely which one, and I'll check the real, live data immediately.
