Owners who want CHS to manage their property, and how else to make CHS friendlier

Part 1. The Mr. Felix scenario: what is built

Short answer to your three questions: 1. **Is there a form for an owner to hand over management?** Not before today. Engage CHS had "Full property management" as a general request, which only starts a conversation and never touches the listing. It is now built as a proper hand-over. 2. **What happens next after the owner fills it in?** The request goes to a CHS admin queue. The admin reviews it, then approves or declines (a reason is required to decline). The owner is notified either way. 3. **What button makes the badge appear?** The owner cannot press anything that turns the badge on, deliberately. The owner presses **"🛡️ Ask CHS to manage this property"**. The badge appears when a **CHS admin presses "Approve and stamp"**. The tag is created at that moment.

The steps for Mr. Felix: 1. He registers, accepts the Terms, verifies his ID, and lists his two or three properties himself (price, photos, video, location and phone are mandatory, as for everyone). 2. In **My Properties**, under each property, he presses **Ask CHS to manage this property**. 3. He ticks what he wants: **Rent, Shortlet, Sale** (any combination). He sees the fee for each, reads six plain points about what he agrees to, and ticks "I own this property and I agree to these terms". The words he agreed to, the fee text and the time are saved with the request. 4. CHS sees it in **Admin → CHS stamp** (top of the page). Each request shows his ID status, purposes, note, fees shown and when he accepted. **Approve and stamp** is only available once the listing itself is verified. 5. On approval: the listing becomes **Managed & Advertised by CHS**, gets its tag (`CHS-######-#`), appears under the "Managed by CHS" filter and on the Managed by CHS page, and he is notified. 6. If he later wants out, he presses **Ask CHS to stop managing this property** and gives a reason. An admin confirms with **End management and remove stamp**. The tag then shows "no longer active" on the check page.

Safeguards: - Only the owner of a property can request. A stranger cannot (tested). - Only one open request per property. - A request needs verified ID and the acceptance box. - Owners cannot approve, stamp or un-stamp (tested). - Every request, approval, decline and ending is in the audit log.

What is still open (your decisions): - **Shortlet fee.** You have fees for rent (10% of gross annual rent, minimum ₦150,000/year) and for sale (a tiered scale), both from Engage CHS. There is no fee for shortlet management yet. The form tells the owner "CHS confirms it in writing before approving". Please set it, for example a percentage of booking income. - **Wording.** The six points an owner accepts are plain-language and are stored as version 1. They are not reviewed by a lawyer. They should become a proper management agreement. - **A tenant-side promise to check.** The listing says a tenant pays only the CHS fee (6%) and no agent, legal, RCD or inspection fee. That is only true if the owner and CHS really operate that way. Make sure the management agreement says so.

Part 2. How else can we make the app friendlier and more flexible?

Ranked by how much I think each helps a real person, with what already exists noted so we do not duplicate it.

For tenants and buyers

1. **Pay rent in instalments.** Most Nigerian landlords demand a year upfront, and that is the real barrier, bigger than agent fees. Let CHS-managed landlords offer quarterly or monthly rent, with CHS collecting and guaranteeing it to the owner. This could be the most valuable feature on the platform. It needs a decision on risk (who carries a tenant who stops paying).
2. **Move-in checklist and receipts in one place.** After paying, the tenant gets a single page: agreement, receipts, condition report, who to call. Much of this exists in separate screens. A single "My home" page would tie them together.

3. **Viewing booking with a time slot.** Instead of "inspection", the tenant picks a slot, and the owner or CHS confirms. Fewer wasted trips, no inspection fee panic.
4. **Neighbourhood facts on the listing.** Power supply hours, water source, flood history, noise, distance to market. Tenants ask these every time. The owner fills in a short list when listing.
5. **Saved searches with alerts** already exist. Add WhatsApp as the delivery channel, because that is where Nigerians actually read messages (needs a WhatsApp provider account).
6. **"Is the price fair?"** A small indicator comparing a rent to similar CHS listings in the same area. Honest, from our own data only, so it only works once there are enough listings.

For owners

1. **A simple "how is my property doing" screen:** views, enquiries, days vacant, rent due. Analytics exist per property. A one-screen summary across all of an owner's properties is missing.
2. **Rent reminders to tenants by SMS or WhatsApp** (the reminder machinery exists; SMS needs the provider fix already on your list).
3. **Co-owners and family access.** Many properties are family-owned. Let an owner add a spouse or sibling as a read-only viewer on the property.
4. **Photo help.** A checklist when uploading ("front, living room, kitchen, bathroom, compound"). Better photos mean fewer wasted viewings.

For agents

1. **A CHS-approved agent badge** for agents who agree to the CHS fee schedule on their own listings. This turns "encourage them to reason with us" into something concrete and gives honest agents a reason to join. It reuses the stamp system with a third level.
2. **Agent track record** (rented-through-CHS count, complaints), visible to tenants.

For everyone

1. **Language.** Hausa, Yoruba, Igbo and Pidgin for key screens and the Guide. This is a big reach gain for the people most hurt by hidden fees.
2. **Low-data mode.** Lighter images and no autoplay video, since many users are on small data bundles. The "pay with fewer taps" flows matter more than polish.
3. **A "Why did this happen?" help button on every error,** that opens a chat or a phone call to CHS. Money apps lose trust fast when a payment fails and nobody explains.
4. **Offline-friendly receipts.** A receipt a tenant can show a landlord or neighbour without opening the app: a PDF with a QR code that opens a public check page, the same idea as the tag check.

What I would do first

(1) instalment rent for CHS-managed properties, (2) viewing slots, (3) the CHS-approved agent badge, (4) the owner summary screen. These four directly attack what Fid described: large upfront cost, paid-for wasted trips, and no way to tell good agents from bad.

Quick live test (10 minutes)

1. Log in as an owner with verified ID (08120000001 / PIN 123456). Open **My Properties**. Press **Ask CHS to manage this property** on a listing. Without ticking the box, the send button stays off. Tick Rent and the box, send.
2. The card now says "CHS is reviewing your request". Try **Withdraw request**, then ask again.

3. Log in as super admin → Admin → **CHS stamp**. The request is at the top. If the listing is unverified, Approve is greyed out until you verify it. Press **Approve and stamp**.
4. Open the listing: gold banner and tag. Home page: the card has the badge. Press **Managed by CHS only**.
5. Back as the owner: the card shows the tag and **Ask CHS to stop managing this property**. Send a reason.
6. As admin: **End management and remove stamp**. Check the tag at /verify-chs: "no longer active".
7. As the owner, ask again, then as admin press **Decline** with and without a reason: it must demand a reason.
