CHS — Complete Feature Catalog

Every feature, how it works, and where to find it (user and admin). Generated from the app's own catalog data. Updated 14 October 2026 (sections 1–19, 299 features).

1. Platform-Wide (Every Role)

Feature	How it works	Where to find it (user)	Where to find it (admin)
Registration with role selection	Buyer, Tenant, Property Owner, Agent, Property Manager, or Commercial Developer — with role-specific extra fields (e.g. professional certificate upload for Managers).	Register page	New accounts land in Admin → Registrations, pending approval
NIN uniqueness check	A real National Identification Number can only ever be tied to one CHS account.	Register page	N/A — enforced at registration
Multi-role linking	One real identity, one wallet, one login can hold several roles at once (e.g. Owner + Tenant) via "Link Account" rather than a second registration.	Link Account page — every role	N/A — self-service
Biometric login (Face ID / fingerprint)	Real WebAuthn — uses the device's own secure hardware; CHS never sees or stores the actual biometric data.	Login page + Profile setup — every role	N/A — self-service
Identity verification (name, gender, age bracket, state, address, occupation, phone, email + ID)	Real, full verification required before any commitment on the platform — an offer, rental application, booking, inspection, or professional engagement. The name typed is compared automatically against the registered name for the reviewing admin. Done once, covers everything after. A NIN is permanently locked to one account, enforced at the database.	Property page (on first commitment) + Profile — every role	Admin → ID Verification (Registration & Setup domain) — shows the name-match verdict and full details
Automated Verification System (AVS) — Phase 1: document text match	A real first-pass check admin can trigger with one button: reads the actual uploaded ID image using Claude's real vision capability, extracts the printed name and ID number, and compares them against what the applicant typed. A clean match is shown plainly; any discrepancy is flagged with both values shown side by side so admin reviews a specific problem rather than re-reading the whole document. Does not confirm the document is genuine or that a face matches — that remains a human judgment call, or a future Phase 2 using a licensed identity-verification provider (Dojah/VerifyMe/Youverify), a separate cost decision not yet made.	Admin → ID Verification — 🤖 Verify Automatically button on each submission	Requires an ANTHROPIC_API_KEY secret to be configured on the Supabase project
Liveness / face verification	Real document upload plus a genuine, real-time photo capture (never an uploaded photo) reviewed by CHS staff.	Registration / Profile — every role	Admin → Face Verification (Registration & Setup domain)
Editable profile with re-verification trigger	Name, phone, address, and state are genuinely editable. A real name change automatically resets ID/liveness verification.	Profile page — every role	Real notification to Super Admin on any name change
Payment safety notice — wallet only	The rule that every payment on CHS is made through the person's own CHS Wallet, and that nobody ever pays a person or a bank account, is shown to everyone: a slim line at the top of every page; a prominent card on the Wallet, Login and Registration pages; and a short line beside every pay button (booking pay cards, rent, rent-to-own, offers, inspections, and wherever the payment-protection notice appears). It is also in the FAQ, the in-app guide and the Users Guide, and was sent to every user as a notification. CHS staff and agents never ask anyone to pay into a personal account or share a PIN.	Every page · Wallet · Login · Registration · beside every pay button	N/A — automatic
Wallet security layers (transfers and withdrawals)	Protection that proves the account holder is really the one moving money, and limits the damage if they are not. (1) A separate 6-digit transaction PIN, stored hashed, asked for on every transfer and bank withdrawal once set, locked for 30 minutes after 5 wrong tries (compulsory for everyone once CHS switches it on). (2) Only ID-verified users may send money to another CHS user. (3) Limits: per transfer, per day, per hour, and a lower cap on a first transfer to a new recipient for 24 hours. (4) Money received from another CHS user can be used inside CHS but cannot be withdrawn to a bank for 24 hours. (5) A daily withdrawal limit. (6) Instant alerts to the sender and the recipient; large transfers alert admins. (7) A one-tap Freeze my wallet for the account holder (only CHS can lift	Wallet → Wallet security; transfer and withdrawal forms; beside every sent transfer	Admin → Wallet Security (reports, reverse, dismiss, freeze recipient); settings in platform_settings

	it). (8) Report this transfer: the amount is held in the recipient's wallet and admins can reverse it while the money is there. (9) Wallet rows are locked during a transfer and a balance can never go below zero. Every number is a setting. Second tranche: (10) Unfamiliar-device checks — the app registers each device; a device new to the account alerts the holder and, for 24 hours, a transfer or withdrawal from it needs a code texted to the phone (once SMS codes are switched on) or is capped at ₦50,000. (11) Texted one-time codes — 6 digits, hashed, valid 10 minutes, 5 tries, 3 requests per 10 minutes, delivered by SMS only (never shown in the app); required at or above ₦200,000 (transfers) / ₦100,000 (withdrawals) or from a new device when switched on; if the SMS cannot be sent the transaction is refused. (12) Money added by card cannot be withdrawn to a bank for 24 hours. (13) An automatic scan every 15 minutes flags unusual patterns (many senders to one wallet, a new account receiving a lot, money going in circles, rapid outflow, a locked PIN) for an admin to clear or freeze.		
Seller's request to release sale money	After a property is paid for, the seller's proceeds (price less CHS commission) are held. They are released when the buyer confirms the documents arrived, when CHS confirms delivery, or when the seller asks: the seller taps Request release of my money on the Owner dashboard; CHS sees the request with the delivery record, verifies delivery from the platform's records or by phoning the buyer (recording which), then approves or declines with a reason; the buyer is told the seller says delivery is done so a false claim can be disputed. Every route releases exactly that sale's own held amount, refuses an unpaid or already-released sale, and never touches other money held in the same wallet.	Owner dashboard → sold property → Request release of my money	Admin → Escrow Oversight → Property sale escrow
Rent to Own: the owner can decline	A request CHS has passed to the owner can be approved or declined. Declining needs a short reason (no contact details), which CHS passes to the buyer; nothing was charged. The owner sees the request at the top of their dashboard, with the CHS reference and never the buyer's phone number.	Owner dashboard → Mortgage (Rent to Own) requests	Admin → Rent-to-Own Requests
Wallet (main + rent savings + maintenance reserve)	Three real sub-balances per user — a main spending balance plus two dedicated savings pots for rent renewal and maintenance costs.	Wallet page — every role	Admin → Finance — search any user's real balances, freeze/unfreeze
Wallet funding via Paystack	Real, secure card/bank/USSD payment; balance updates automatically once payment genuinely completes.	Wallet page — every role	N/A — self-service
Wallet withdrawal to bank	Only one linked bank account per wallet, for security. Real Paystack transfer to the verified account.	Wallet page — every role	N/A — self-service, admin sees real withdrawal_requests records
Wallet-to-wallet transfer	Send funds directly to another CHS user by phone or email — real-time lookup and instant transfer.	Wallet page — every role	N/A — self-service
Bank account linking with real-time verification	200+ real Nigerian banks with search; the account number is checked against the real bank network before it can ever be linked. Real 48-hour security window on any change.	Wallet → Link bank account — every role	N/A — self-service, real-time
Notification preferences	Independent real toggles for offers, messages, and marketing notifications.	Profile page — every role	N/A — self-service
Diaspora Mode	A real setting for CHS users managing property or transactions from outside Nigeria.	Profile page — every role	N/A — self-service
Terms & Conditions scroll-to-accept gate	A real, meaningful acceptance — the checkbox only unlocks after genuinely scrolling to the bottom. Required before any dashboard is reachable. The Terms carry a version number: when they change (Version 3, October 2026, rewrote term 11 on bookings), everyone is shown what is new and asked to accept once more. Every acceptance is logged permanently with the version and the exact time, and the log cannot be altered.	First login — every role	N/A — one-time gate per version
Role-specific first-dashboard guide + persistent Users Guide	A short popup on first dashboard visit, plus a full, always-accessible reference page.	First login popup + More menu → Users Guide	N/A — reference
Dark mode	A real, complete theme system across the whole app, with an app-wide fix ensuring form text stays readable in both modes.	Every page — every role	N/A — visual

PWA install + splash screen	Installable as a real app on the home screen, with a proper full-screen splash and app icon.	Browser install prompt	N/A — visual
Guest — its own real role	A genuine, separate role from Buyer, for booking a shortlet apartment or a hotel/lodge/event centre/car park stay — its own heading at registration and login, not merged into another role.	Register / Login page — every role	N/A — self-service
Account approval gate	A real, enforced rule: a newly registered account cannot use anything beyond the public homepage until CHS staff approve it — previously unenforced despite existing in the database.	Every page — every role	Admin → Registrations
Account suspension & appeal	Real admin tools to suspend a suspicious account with a documented reason, and a genuine appeal channel that stays reachable even while suspended.	Suspended-account screen — every role	Admin → Overview, Suspend a Real Account
Self-service account deactivation	A real, reversible way to temporarily deactivate your own account — nothing deleted, log back in any time to reactivate.	Profile page — every role	N/A — self-service
Automatic image compression	Every property photo and profile picture is resized and re-compressed in the browser before upload — no action required, real storage savings confirmed by direct testing.	Every photo upload — every role	N/A — automatic
Real-time number validation (phone, NIN, ID, bank account)	One shared rulebook checks every phone number, NIN, passport, voter's card, driver's licence, and bank account number as it's typed, on submit, and again in the database itself — so a malformed number can never be saved from any screen.	Every form collecting a phone, ID, or account number — every role	N/A — enforced automatically; a malformed existing record is flagged on the ID review screen
Digital receipts	A real, printable receipt (Print/Save as PDF) for any transaction — rent, remittance, commission, sale — using the same reference number already generated for it.	My Receipts page — every role	N/A — self-service

2. Buyer & Tenant

Feature	How it works	Where to find it (user)	Where to find it (admin)
Location + price search	Filter by state, LGA, area, property type, minimum bedrooms, and a real minimum/maximum price range.	Homepage search — Buyer / Tenant	N/A — self-service
Rent / Sale / Shortlet tabs	Real filtering of the whole catalog by purpose.	Homepage — Buyer / Tenant	N/A
Saved Properties & Saved Searches	Save individual listings, or save a whole search to be matched automatically as new listings arrive.	Saved page — Buyer / Tenant	N/A — self-service
Making an offer (sale)	Propose a real price directly to the owner; goes through a real CHS Sale Approvals checkpoint before anything moves to escrow.	Property detail page — Buyer	Admin → Sale Approvals (Owner/Buyer/Tenant domain)
Rental application + independent guarantor confirmation	A real application, screened by CHS staff before the owner ever sees it. The applicant provides only their guarantor's name and phone number; the guarantor completes everything else — address, occupation, their own ID, a real proof of address, and a signed confirmation — independently, through their own private link, and cannot share the applicant's surname.	Property detail page — Tenant; guarantor's own link	Admin → Applications (Owner/Buyer/Tenant domain)
Inspection booking + transport fee	A physical inspection is a last resort: photographs, room videos and requests for more of either are free. If a buyer or tenant still insists on visiting, the WHOLE round-trip transport cost is theirs — not split with the owner, not carried by CHS — at ₦150 per km each way, from where the CHS agent actually sets off. Booking takes nothing; CHS assigns an agent and records their takeoff point and distance, which fixes the final cost. The requester then pays it FROM THEIR WALLET (My Inspections); it is held until the visit and released to the agent (also if the requester does not attend). Refunded in full if the owner or CHS cancels or the requester cancels 12+ hours ahead; inside 12 hours it goes to the agent. A visit not paid for 2 hours before it is due lapses with nothing charged. A genuine 12-hour minimum notice is enforced by the database itself.	Property detail page — Buyer / Tenant	Admin → Inspections (Owner/Buyer/Tenant domain)
Buyer/Tenant Readiness Score	A real questionnaire (timeline, funds ready, decision-maker) plus verification and inspection-attendance history — shown to owners, never a fee or gate.	Inspection booking form — Buyer / Tenant	N/A — computed live

Shortlet booking	Booked request-first: the guest picks dates on the availability calendar and sends a request — nothing is charged. CHS passes it to the host, who confirms the dates are free; the guest then pays within a short window and the payment is held in escrow until check-in is confirmed. Real guest verification required. See section 16 for the full flow.	Property detail page → My Bookings — Buyer / Guest	Admin → Shortlet/Hire Bookings
Rent-to-Own	Where offered, a real monthly amount counting toward eventual ownership, shown directly on the listing.	Property detail page — Buyer	N/A — set by owner at listing time
House Rules acknowledgment	A real, documented agreement a tenant acknowledges as part of their tenancy.	Tenant dashboard, per tenancy	N/A — set by owner
Property Condition Report	Documented and photographed at move-in — real evidence-based liability instead of a caution-fee guess.	Condition Report page — Tenant	N/A — self-service
Formal Notices	Real formal communications (e.g. rent reminders, lease notices) from owner/CHS, viewable and expandable.	Tenant dashboard	N/A — sent by owner/CHS
Owner–tenant message thread	A real, direct messaging channel per tenancy.	Tenant dashboard, per tenancy	N/A — self-service
Raise a Dispute	A real, two-sided dispute process — CHS's internal resolution is the first step before arbitration or courts.	Tenant dashboard + Owner dashboard	Admin → Disputes (Customer Care domain)
Talk to an Agent (Concierge)	Describe a property need in free text or voice instead of using search filters — a real request CHS follows up on personally.	Bottom nav → Property request — Buyer / Tenant	Admin → Concierge, within Owner/Buyer/Tenant domain
Urgent & Emergency Sale browsing	Real, discounted, time-boxed listings shown in a dedicated homepage row with the real deadline.	Homepage — Buyer	N/A — browsing only
Market data (average prices, demand trend)	Real, genuine data (not placeholder figures) on current prices and search-driven demand patterns.	Bottom nav → Average prices / Demand trend	N/A — self-service
Engage CHS — buy a construction project	Full request flow with real specifications, document checklist, two-way chat, and the Construction Roadmap tool.	Engage CHS page — Buyer / Owner	Admin → Engage CHS (Super Admin only)
Hotel, Event Centre, Hall, Car Park, Cinema & Recreational/Sports booking	A real request-first booking flow — not a rental application — for any genuine guest venue, correctly categorized and commissioned: send a request (nothing charged), CHS relays it, the venue confirms, the guest pays within a short window. A business-lease “hire” listing (e.g. a filling station) correctly stays on the rental-application path instead.	Property detail page → My Bookings — Buyer / Guest	Admin → Shortlet/Hire Bookings
Auto-pay rent from a dedicated savings wallet	An optional, real toggle — rent pays itself the moment it's due from a separate Rent Savings balance, or stays fully manual if left off.	Tenant dashboard, per tenancy	N/A — self-service
Rent held in real escrow	Paid rent is not released to the landlord immediately. Held until the tenant files a genuinely clean move-in report, or 14 days pass with nothing raised — the same real protection a buyer's money gets. An open fault or a flagged report item pauses release for admin review.	Tenant & Owner dashboards, wallet — Tenant / Owner	Admin → Escrow Oversight (Owner/Buyer/Tenant domain) — release early, or review a flagged hold
Subsequent-year rent — no repeat tenant commission	The system now genuinely knows a renewal from a first payment. From year two onward, the tenant pays CHS nothing further — only the landlord, at a real, reduced 3%. Shown live on both the tenant's and owner's rent countdown.	Tenant & Owner dashboards, rent countdown	N/A — automatic
Move-out condition report + real court affidavit	A genuine move-out counterpart to the existing move-in report, with a real, required court-issued affidavit upload — now actually visible to the landlord, which it never was before.	Condition Report page — Tenant; visible on Owner dashboard	N/A — self-service
Non-renewal notice with a real message	A genuine optional message sent to the landlord along with the notice — previously a bare, wordless click.	Tenant dashboard, per tenancy	N/A — self-service
Real street address on every listing	A required, specific address (e.g. "House 12, Shagari Road") — not just a general neighborhood — visible on the tenant's own dashboard and usable for real fault/payment tracing.	List a property form; Tenant dashboard	Admin analytics, traceable by real address

3. Property Owner

Feature	How it works	Where to find it (user)	Where to find it (admin)
List a property	Photos, location, price, purpose, bedrooms, and special terms (rent-to-own, house rules). Starts unverified.	Owner dashboard → List a property	Admin → Properties (Owner/Buyer/Tenant domain)
Property verification	CHS reviews every listing before it's publicly visible — the real meaning behind "CHS Verified."	Owner dashboard	Admin → Properties (Owner/Buyer/Tenant domain)
Fixed-tier promotion (7/30/90-Day Boost)	One-off paid tier, debited directly from the wallet.	Promote page, per listing	N/A — self-service
Credit-based promotion (pause anytime)	Real, shared credit balance across every listing; each listing charged separately per real day it's on, based on real location/size cost. Real ranking (Category A–D + literal Top 10/20 position) against the same real local market.	Promote page, per listing	N/A — automatic, database-driven
Urgent & Emergency Sale activation	Requires the listing already verified and owner ID-verified. Real original price, discount, and deadline shown to buyers.	Owner dashboard → 🚨 Urgent Sale	Notified via general notifications on activation
Managing offers & rental applications	Real accept/reject decisions on real, CHS-screened offers and applications.	Owner dashboard	Admin → Sale Approvals / Applications
Inspection management + Readiness Score visibility	See each real requester's readiness score; mark real attendance/no-show after the scheduled time passes.	Owner dashboard, per property	Admin → Inspections
Delegating to a Property Manager	Hands maintenance and certain approvals to a registered Manager; reversible any time.	Owner dashboard	N/A — self-service
Property analytics	Real view counts, inspection counts, and interest counts — not fixed placeholder numbers.	Analytics page, per listing	N/A — self-service
Editing a live listing	Real edits to an already-published property.	Edit listing page	N/A — self-service
Engage CHS for a professional service	Full Property Management, Sale Negotiation, Construction Monitoring, Project Management, Renovation — each with its own real terms and fee schedule.	Engage CHS page — Owner	Admin → Engage CHS (Super Admin only)
Download verified sale documents	The actual, CHS-verified legal documents (Certificate of Occupancy, Deed of Assignment, etc.) genuinely downloadable by a paying buyer directly — previously only ever tracked as a physical-dispatch status with no real digital access.	Property detail page, after payment — Buyer	N/A — self-service
Accept an offer at negotiated terms, mid-chat	A real conversion point that didn't exist before — accept at a different final price than the original offer, with an optional condition (e.g. a payment deadline), directly from the ongoing negotiation.	Owner dashboard, per offer	N/A — self-service

4. Agent

Feature	How it works	Where to find it (user)	Where to find it (admin)
Unique referral link	A real code (e.g. CHS-AG-0024) automatically attached to every property link generated — always opens the property directly on CHS.	Agent dashboard	N/A — self-service
Automatic commission attribution	If a referred visitor completes a real transaction on that property, CHS automatically attributes and credits the commission.	Agent dashboard	Admin → Referral fees (Agent Relations domain)
Real referral tracking (masked for privacy)	Real deal stage, earnings this month, and total earned — served from a privacy-conscious masked view.	Agent dashboard	Admin → Referral fees
Managing an agent-managed property's own commission	For a property under full agent authority, set your own real market rate (e.g. 10-15%) with the client — CHS charges the client nothing extra, taking a real, capped 3% only from your own earnings.	Agent dashboard, per managed property	N/A — self-service
Per-owner commission rate —	A genuine, editable rate per real owner relationship, not re-entered per property — reviewable and adjustable any time, applying	Agent dashboard → Your Real	N/A — self-service

one real, standing rate	automatically to every property you manage for that owner, including new ones.	Commission Rate Per Owner	
Digital remittance to an owner's wallet	Rent collected in person, remitted straight into the real owner's wallet with your agreed commission auto-deducted — a real, permanent reference either side can point to.	Agent dashboard → Remit Collected Rent to an Owner	Admin → Finance, real remittances table
A real tenant register	Full biodata, property details, and a real auto-generated reference number (e.g. TEN-000001) for every tenant you manage — plus real ID and selfie verification.	My Tenant Register page	N/A — self-service
A real mini-admin — your own team	Add real, separate staff accounts by phone number, assign a role, and see their genuine daily activity reports — the same kind of oversight CHS itself runs on.	Agent dashboard → Manage My Team	N/A — self-service
Multiple linked bank accounts	Up to 4 real, Paystack-verified bank accounts — a genuine business need for agents working across multiple banking relationships, unlike every other role which stays single-account.	Profile → Linked bank accounts	N/A — self-service
Expenses & income tracking	Real salary, rent, transport, logistics, and commission income entries — a genuine net position, not just a spending log.	My Expenses & Income page	N/A — self-service
My real activity report	A genuine, date-range (week/month/quarter) report of commission earned, deals closed, and tenancies managed.	Agent dashboard → Generate my activity report	N/A — self-service

5. Property Manager

Feature	How it works	Where to find it (user)	Where to find it (admin)
Delegated property management	Owners can delegate specific properties; maintenance and certain approvals route to the manager directly.	Manager dashboard	N/A — self-service
Management termination	An owner can reverse delegation any time, handing responsibilities back.	Owner dashboard (trigger) / Manager dashboard (effect)	N/A — self-service
Posting a maintenance job for quotation	Real job posts that verified artisans can quote on, ranked by a transparent rating/reliability/experience/equipment formula.	Manager dashboard	Admin → Maintenance (Artisan/Developer/PM/Vendor domain)
Rating an artisan	Real, genuine ratings after a completed job.	Manager dashboard, per completed job	N/A — self-service
Owner-occupier support in estates	Register a real occupant who owns their unit outright (no tenancy) alongside genuine tenants in the same estate — correctly counted in occupancy and included in service-charge billing.	Manager dashboard, per estate unit	N/A — self-service
Per-owner commission rate, digital remittance, tenant register, mini-admin team, multiple bank accounts, expenses tracking	Every real business tool built for agents this round applies identically to managers — the same standing per-owner rate, the same digital remittance, the same tenant register and team system.	Manager dashboard — same real pages as Agent	N/A — self-service
My real activity report — across all my estates	A genuine, date-range report of new tenancies, service charges billed and collected, and maintenance resolved across every estate you manage.	My Estates page → Generate my activity report	N/A — self-service

6. Commercial Developer

Feature	How it works	Where to find it (user)	Where to find it (admin)
Developer registration & review	A real application reviewed by CHS before projects go live.	Register / Developer dashboard	Admin → Developers (Artisan/Developer/PM/Vendor domain)
Listing development projects	Estates, instalment plans, and investment plans.	Developer dashboard	Admin → Developers

7. Vendor & Marketplace

Feature	How it works	Where to find it (user)	Where to find it (admin)
Vendor registration & verification	Three clearly separate sign-up paths: ARTISAN (trades such as plumbing and electrical), VENDOR (sells goods: Interior Design, Furniture, Bedding & Textiles, Electronics & Home Appliances, Kitchen, Building Materials) and SERVICE PROVIDER (Security, Cleaning, Fumigation & Pest Control, Facilities Maintenance). Each shows only its own categories. State and LGA are dropdowns (the LGA list follows the chosen state), a service provider ticks the states it covers, and required fields are marked. Every registration alerts the responsible admins automatically (bell notification, a marker on the Vendors / Artisans tab), and CHS reviews it under Verification before the listings go public.	Become a Vendor / Vendor dashboard	Admin → Vendors (Artisan/Developer/PM/Vendor domain)
Listing products & bundles	Real materials/services catalog, browsable by category on the Marketplace.	Vendor dashboard (list) + Marketplace page (browse)	N/A — self-service
Service quote requests	Real incoming requests for a quote on a specific service.	Vendor dashboard	N/A — self-service
Referral fee tracking	Real fees on deals connected through the Marketplace.	Vendor dashboard	Admin → Referral fees

8. Artisan

Feature	How it works	Where to find it (user)	Where to find it (admin)
Artisan registration & verification	Real trades, years of experience, certification, and equipment tier (with photo/receipt backing) — reviewed before quoting is allowed.	Become an Artisan / Artisan dashboard	Admin → Artisans (Artisan/Developer/PM/Vendor domain)
Quoting on maintenance jobs	Real quotes ranked by a transparent formula: rating/reliability first, experience second, equipment third.	Artisan dashboard	Admin → Maintenance
Full-management job priority	For any property under full CHS management, maintenance work goes first and exclusively to verified CHS Maintenance Agents.	Automatic — Artisan	N/A — automatic
Job dispute resolution	Either the artisan or the client can raise a genuine, two-sided dispute about a completed job.	Artisan dashboard	Admin → Disputes
Ratings received	Real, visible rating history.	Artisan dashboard	N/A — self-service

9. Admin & Platform Management

Feature	How it works	Where to find it (user)	Where to find it (admin)
Super Admin role	One real account, practically involved in every part of the platform — handles Finance and Engage CHS directly, and ratifies every sub-admin's high-stakes decision.	Admin dashboard	Admin → Overview
Five real sub-admin domains	Customer Care, Registration & Setup, Owner/Buyer/Tenant, Agent Relations, Artisan/Developer/PM/Vendor — each sub-admin only sees and acts within their own domain, enforced at the database level.	Admin dashboard, tab-gated per domain	Admin → Overview → Assign an admin role
Code-based admin login approval	A sub-admin's correct password alone isn't enough — a real code is generated and sent to the Super Admin, who must approve that specific login.	Sub-admin login flow	Admin → Overview — pending login approvals
High-stakes approval queue	Routine sub-admin actions apply immediately; financial and verification decisions are held pending real Super Admin sign-off.	Admin dashboard, across relevant tabs	Admin → Overview — pending sub-admin actions
Trace an Account	Search any real user by phone/email/name and see their full wallet balance + transaction history, promotion credits + active promotions, construction roadmap unlocks, linked bank account,	N/A — admin only	Admin → 🔎 Trace an Account (Super Admin only)

	and Engage CHS requests — all in one place. The real fix for resolving a support issue ("I paid but nothing happened") the way a phone network traces an account from just a phone number.		
Sub-admin action history	A real, permanent audit log of every resolved sub-admin request — previously, once approved or rejected, a request simply vanished with no record.	N/A — admin only	Admin → Overview → View sub-admin action history
Pre-launch admin test mode	Super Admin can preview any real dashboard using their own account, never a real user's data, with a visible banner the whole time.	N/A — testing tool	Admin → Overview → Switch role for testing
Finance	Search any real user's wallet, view all three real balances, freeze/unfreeze.	N/A — admin only	Admin → Finance
Sale Approvals	The real checkpoint between an accepted offer and money moving to escrow.	N/A — admin only	Admin → Sale Approvals
Face Verification (Liveness)	Real human review of each real-time capture.	N/A — admin only	Admin → Face Verification
Registrations	Approve or reject new real accounts.	N/A — admin only	Admin → Registrations
Applications	Real rental application review before an owner ever sees it.	N/A — admin only	Admin → Applications
Properties	Real listing verification before it's publicly visible.	N/A — admin only	Admin → Properties
Disputes	Real, two-sided dispute resolution across tenancies and artisan jobs.	N/A — admin only	Admin → Disputes
Feedback	General platform suggestions/complaints, not tied to a specific transaction.	N/A — admin only	Admin → Feedback
Engage CHS	Real professional-service requests: specifications, document checklist, two-way chat, roadmap access — Super Admin only, per direct instruction.	N/A — admin only	Admin → Engage CHS
Vendors	Real marketplace vendor verification.	N/A — admin only	Admin → Vendors
Referral fees	Real agent/vendor commission tracking and payout, routed through the approval queue.	N/A — admin only	Admin → Referral fees
Maintenance	Real fault report routing to the right artisan/manager.	N/A — admin only	Admin → Maintenance
Artisans	Real trade/equipment verification before an artisan can quote.	N/A — admin only	Admin → Artisans
Inspections	Real upcoming inspection oversight across the whole platform.	N/A — admin only	Admin → Inspections
Developers	Real developer application review.	N/A — admin only	Admin → Developers
Real, date-range analytics report	A genuine, filterable (today/week/month/quarter) record of properties sold, new tenancies, shortlet bookings, new listings, new users, and total commission revenue by transaction type — not just a live, un-datable snapshot.	N/A — admin only	Admin → Analytics
Suspend a real account, with a genuine appeal process	Suspend by phone number with a required, documented reason; a real appeal queue to approve (reinstate) or deny.	N/A — admin only	Admin → Overview
CHS staff daily report	Any real internal admin staff member can submit their own daily activity report, visible to the super admin.	N/A — admin only	Admin → Overview → Submit My Daily Report
Critical data-protection fixes	A direct security audit found and closed a real, proven exposure — any logged-in user could previously read another user's NIN, phone, and ID documents. Fixed at both the database and file-storage level, re-verified after the fix.	N/A — platform-wide	See the separate Security Audit report
Missing database indexes added	Dozens of real foreign-key columns had no index — invisible at small scale, a genuine slowdown waiting to happen as real data grows. Added across every high-traffic table.	N/A — platform-wide	See the separate Scalability Assessment report
Real, editable Contact Us details	Four real, distinct contact emails (Support, Inquiry, Engage CHS, Admin) and two real phone numbers — genuinely admin-editable at	More menu → Contact us — every	Admin → Overview → Edit Real Contact

	any time, not hardcoded into the app.	role	Details

10. Estate Management, Rent to Own, and Real Automation

Feature	How it works	Where to find it (user)	Where to find it (admin)
Estate Management	A real, bounded estate of many housing units under one manager, distinct from delegating individual properties one at a time.	Manager → My Estates	Admin → Overview
Estate subscription	Real monthly pricing that scales with unit count, and drops per-unit as an estate grows — paid directly from the manager's wallet.	Manager → My Estates → Subscribe	N/A
Bulk unit onboarding	Upload a real CSV to add many units at once instead of one at a time — the real answer to onboarding an estate of hundreds of units.	Manager → My Estates → [Estate]	N/A
Estate service charges	A real, distinct-from-rent charge billed to every occupied unit at once; vacant units are automatically skipped.	Manager dashboard / Tenant dashboard	N/A
Rent to Own / Mortgage	A listing category for progressive ownership through monthly instalments, labelled “Mortgage (Rent to Own)” in the app. The buyer must be fully verified and gives their name, phone, occupation, source of funds and address before the request is sent. Every request and every owner answer goes to CHS first: admin relays the request to the owner or rejects it with a reason, and relays the owner's approval or decline to the buyer. The buyer can pay one instalment or any larger amount up to the full balance; every payment goes from the wallet to CHS (instalment + 5.5% buyer commission), is held, and is released to the owner (instalment – 4.5%) by admin, singly or with Release all. The final payment is held until the property documents are handed over. At 100% the property is marked sold. The owner sees the buyer only as a first name and initial plus a CHS reference, never the phone number or full name.	Property listing page / Buyer Mortgage page / Owner dashboard	Admin → Rent-to-Own: every agreement newest first, with Payments to release
Reminder Engine	One real, generic escalation system: rent-due cadence, maintenance follow-up (artisan → manager), and shortlet guest-message escalation (host → admin) — multi-channel (in-app, SMS, email).	N/A — automatic, background	N/A
Shortlet/Hotel guest-host messaging	Guest and host never deal with each other directly: every message goes through CHS. Until a booking is paid, each message waits for CHS review and the other side cannot read it; after payment it is delivered at once. Phone numbers and email addresses are refused at all times. The guest never sees who the host is; the host sees the guest's name and a CHS reference, never their phone number.	My Bookings (guest) / Owner & Host dashboards (host)	Admin → Shortlet/Hire Bookings → message review
Maintenance Reserve — real funding	An owner can fund their Maintenance Reserve directly from their Main Wallet for a real, larger repair; artisan payments draw from the Reserve first, and unused funds can be withdrawn back freely.	Wallet page	N/A

11. Real Sale Payment, Escrow, and Client-Testing Fixes

Feature	How it works	Where to find it (user)	Where to find it (admin)
Real Sale purchase-price payment	The genuine mechanism for a buyer to pay a seller the actual purchase price — not just commission. A single, transparent checkout: the buyer's total automatically includes their own commission (shown as both a percentage and a real value), the seller's net automatically excludes theirs.	Property page, once an offer is accepted	N/A
Real, sourced Sale legal documents	Certificate of Occupancy, Deed of Assignment, Survey Plan, Governor's Consent, Tax Clearance Certificate, Sale Agreement, and (for a developed property) Building Plan Approval — sourced from genuine Nigerian legal references. Required at listing time; a buyer's payment is blocked until every one is CHS-verified.	List a property (Sale)	Admin → Face Verification tab (Sale documents)
Escrow hold on sale proceeds	A seller's real proceeds are visible in their wallet the instant a buyer pays, but not withdrawable until CHS confirms the real, physical legal documents have been transferred to the buyer.	Wallet page	Admin → Registrations tab (Confirm legal transfer)
Real, admin-reviewed identity verification	A buyer's ID submission previously self-certified the instant the form was filled in. Now creates a genuine pending record, reviewed and approved by real CHS staff before it counts.	Making an offer (if not yet verified)	Admin → Registrations tab

Mobile logout	A working logout in the persistent bottom navigation's More menu — previously only reachable from the homepage.	Bottom nav → More	N/A
Context-aware House Rules	Only appears for Rent, Lease, Shortlet, and Rent to Own listings — no longer shown on a Sale listing where it never applied.	Owner dashboard	N/A
Real, progressive nearby-properties matching	The "similar properties" advertising system now genuinely widens from exact area → LGA → state, and matches property type, rather than matching the whole state regardless of relevance.	Property detail page	N/A
Seller response note on an offer	A real, optional message a seller can attach when accepting or declining an offer — delivered directly to the buyer's notification, matching the note a buyer could already leave.	Owner dashboard	N/A
Rent countdown and 90-day non-renewal notice	A real, live day-count to next rent on the tenant dashboard, and a genuine notice mechanism that honestly records whether notice was given within or after the requested 90-day window.	Tenant dashboard	N/A

12. Round 3 Client Testing — Real Fixes and New Features

Feature	How it works	Where to find it (user)	Where to find it (admin)
Verification review moved to the right place	A real, repeated complaint — buyer ID verification submissions "vanished." The real root cause: this review screen lived under an unrelated tab called "Face Verification." Moved into "Registrations," where it's actually found.	N/A — admin only	Admin → Registrations tab
Gender field and a respectful greeting	A real gender field at registration — the homepage now greets "Hi Mr. Samson" / "Hi Miss Jennifer" instead of a bare first name.	Register page; Homepage	N/A — self-service
Dynamic, per-role comprehension questionnaire	Real, separate question banks for Buyer, Guest, Tenant, Owner, Agent, and Manager — each genuinely testing that role's own real Terms & Conditions clauses, not one static quiz for everyone.	Register page	N/A — self-service
Required-field markers and auto-scroll-to-error	A real red asterisk on every genuinely required field; submitting an incomplete form now scrolls straight to the exact missing field and highlights it in red.	Register page	N/A — self-service
Real State → LGA multi-select for agent coverage area	A genuine checklist of every real LGA in the agent's state, plus a "Statewide" shortcut that selects them all in one click.	Register page (Agent)	N/A — self-service
"Others" registration category for artisans, market sellers, and service providers	A real, new registration option leading to a genuine "choose your category" page, bridging straight into the existing Artisan and Vendor application forms that were previously unreachable from registration.	Register page; Login page	N/A — self-service
Real login for Artisans and Vendors/Service Providers	Confirmed and fixed a genuine gap: someone approved as an Artisan or Vendor had no way to log back in as themselves. Login now checks their real, separate application record for these two categories.	Login page	N/A — self-service
CHS-specific inspection-fee question	Reworded to specifically ask about a CHS agent acting on CHS's own commission structure — CHS cannot control what an independent agent charges their own client.	Register page	N/A
Independent agent fee builder and real Total Package	An agent listing a property can add any number of named, real fee lines (Custom fee, Legal fee, Agent fee, etc.) with their own percentage, rolling into one real, transparent "Total Package" shown on the listing — visually distinct from a CHS-managed listing's "no extra fees" badge.	List a property (Agent); Property detail page	N/A — self-service
Real, live admin notification bell	A genuine, real-time notification bell with an unread badge — database-level triggers now automatically notify admin the instant a new registration or ID verification comes in, regardless of which part of the app created it.	N/A — admin only	Admin dashboard header
Real shortlet booking data fix	Found and fixed the actual cause of shortlet bookings failing outright — 20 of 22 real listings were missing their nightly price. Backfilled the real data and added a permanent fallback so this can't silently recur.	Property detail page (Guest)	N/A
Correct role-based landing after login/registration	Fixed two real, separate bugs sending every role to the generic homepage — the registration redirect, and a completely separate Face ID/fingerprint login path that ignored role entirely.	Login page; Register page	N/A

Staff login, made discoverable and functional	Confirmed the Manage-My-Team and staff-reporting features already existed; found and fixed the real, missing piece — a brand-new staff member had no role to register under. "Staff / Employee" is now a real registration option.	Register page; Login page; /staff	N/A — self-service
Real "My Properties & Owners Register"	A genuine register of every property and owner under an agent/manager's real management — property, address, owner name, owner phone, and agreed commission rate — parallel to the existing tenant register.	Agent/Manager dashboard	N/A — self-service
Real one-step-back navigation	Fixed a hardcoded "back to homepage" link repeated across 15 real sub-pages — each now genuinely returns one real step, not straight to the homepage.	Every sub-page — every role	N/A
Detailed, consequential guarantor form	Added real relationship-to-applicant, guarantor address, guarantor occupation, and a genuine, plain-language consent statement — not just a bare name and phone number.	Rental application (Tenant)	N/A — self-service
Real, complete rental application review for admin	Admin can now see full applicant details (occupation, address, income, ID, uploaded document) and full guarantor details, plus which real property and owner it's for — genuine vetting is now possible before forwarding.	N/A — admin only	Admin → Applications tab
CHS-mediated owner decision on rental applications	An owner's approve/decline is now recorded, not finalized immediately — CHS admin reviews and relays the real, final decision to the applicant, keeping CHS genuinely in the loop both ways.	Owner dashboard; Admin → Applications tab	Admin → Applications tab

13. Agent/Manager Tools, Host/Guest/Developer Roles, and the Shortlet Rebuild

Feature	How it works	Where to find it (user)	Where to find it (admin)
Real team/staff system	An agent or manager can invite genuine, separate staff accounts, assign a role label, and see each one's real daily activity report.	Agent/Manager dashboard → Manage My Team	N/A — self-service
Team/staff subscription	Free for up to 2 real staff; a real subscription required from the 3rd, tiered by staff count, with exact multi-month discounts (6 months paid → 8 months of real access; 12 paid → 18).	Agent/Manager dashboard → Manage My Team	N/A
Real tenant register and property/owner register	Per-agent, searchable registers with real ID documents attached, replacing an informal spreadsheet.	Agent/Manager dashboard	Admin → Tenant Register Oversight
Expense tracking, owner remittance, digital receipts	Real income/expense entries, a real flow for remitting collected rent to the actual owner, and auto-generated digital receipts for completed transactions.	Agent/Manager dashboard → Expenses	N/A
Independent agent commission model and custom fee builder	A real, adjustable per-owner commission rate, plus any number of named custom fee lines rolling into one transparent Total Package.	Agent dashboard; List a property (Agent)	N/A — self-service
Host and Guest as real, separate roles	Split from Owner/Buyer with their own dedicated dashboards, built the same way as every other role.	/host; /guest	N/A — self-service
Real shortlet/hire request-to-book flow	Superseded by the request-first flow (section 16). History: first rebuilt so a guest saw the true, full cost before committing and a host had to accept or decline; the guest was then charged at request time. Since October 2026 nothing is charged until the host has confirmed the dates.	Property page (Shortlet/Hire)	Admin → Shortlet/Hire Bookings
Real host payout	Released deliberately by admin, net of the host's own commission — the same CHS-mediated pattern used for sale-proceeds release.	N/A — admin only	Admin → Shortlet/Hire Deposits & payouts
Two-way ratings	Guest and host can each rate the other once, after a confirmed stay.	Guest dashboard; Host dashboard	N/A
Real, stated cancellation policy	Server-enforced: full refund 48+ hours before check-in, 50% within 48 hours, none after.	Guest dashboard	N/A
Flexible security deposit	Host-toggled per listing; applies only to a genuinely first-time guest and auto-waives after their 3rd real rating. Resolved by admin — release to guest or claim for host with a required reason.	List a property (Shortlet/Hire)	Admin → Shortlet/Hire Deposits
House-rules	A guest must now see and check a box agreeing to a property's real	Shortlet/Hire	N/A

attestation	house rules before requesting to book — closing a gap where the feature existed for hosts but was invisible to guests.	booking form	
Dispute-filing for Guest and Host	A working dispute form already existed for Tenant/Owner; now genuinely reachable from Guest and Host dashboards too.	Guest dashboard; Host dashboard	Admin → Disputes tab
Developer as a real, separate role	Could previously register but had no login path and no dashboard at all. Built the same way as Host/Guest — real application status, portfolio, and listings.	/developer	N/A — self-service
Real ID-number field per document type	Fixed a genuine bug: choosing any ID type other than NIN had nowhere to enter that document's own number — the system was silently saving the person's NIN instead. A real, conditional number field now appears per ID type.	Register page	N/A — self-service
Multi-role KYC review fix	Admin's document review only ever checked a person's primary role, missing real credentials attached to a secondary role — found and fixed against a real, in-house test case.	N/A — admin only	Admin → Registrations tab
Fresh, live document links	Document links previously relied on a URL signed once and stored permanently — a real structural fragility. Every document link now generates a fresh, live signed URL at the moment someone actually clicks to view it.	Throughout admin and owner/host document review	N/A
Property reference numbers and admin search	Every property now has a real, permanent reference number (PROP-000001 style), backfilled for every existing property. A real admin search finds any property by reference, title, or the real owner's name/phone.	N/A — admin only	Admin → Properties tab
Real PIN reset	Phone + NIN verification, since the platform has no email/SMS infrastructure. Did not exist in any form before this.	Login page → Forgot your PIN?	N/A — self-service
Real FAQ page	Written from CHS's own actual Terms & Conditions and features, not copied from another platform.	More menu → Help & FAQs	N/A
Add a role without logging out, plus a role switcher	An already-authenticated session now skips the phone/PIN re-verification entirely when adding a role. Profile page shows every real role as a tappable pill for instant switching.	Profile page → Add another role	N/A — self-service
Desktop splash screen fix	Reproduced directly with a real screenshot before fixing — a background image built for a phone's tall aspect ratio was being cropped into an unrecognizable dark sliver on a wide desktop screen. Mobile confirmed untouched.	Login page (first load)	N/A
Four new per-role color themes	Host, Guest, Developer, and Staff — previously quietly borrowing another role's colors — now each have their own genuinely distinct color identity.	/host; /guest; /developer; /staff	N/A

14. Marketplace Rebuild, Guarantor Verification, Event Pricing, and Notification Overhaul

Feature	How it works	Where to find it (user)	Where to find it (admin)
Redesigned receipt and payment voucher	A real, branded document — gradient header, a genuine watermark seal, proper serif typography — replacing a plain data table, per direct client feedback.	/receipt/[reference]	N/A
Real, tiered artisan commission	6% for labor under ₦100,000, 8.5% at or above, on labor only — never on materials procured separately. Replaces an earlier flat 10%.	N/A — automatic on job payment	N/A
Marketplace: admin-mediated, contact-filtered messaging	Every quote request and vendor response is held for real CHS review — a phone number or email in either direction is caught and blocked automatically — before the other party ever sees it.	Marketplace → Request a quote	Admin → Marketplace Moderation
Marketplace: real, escrow-backed payment	Accepting an approved quote charges the buyer the real price plus 6%, held in escrow; the vendor receives the price net of 4% only once CHS confirms delivery. Full refund available if a deal falls through.	My Requests → Accept & Pay	Admin → Marketplace Moderation
Marketplace: detailed product listings	A product is described the way established marketplaces describe goods: brand, model, condition (new / refurbished / used), price and unit, stock quantity, SKU, a specification set that is different for each category (for Electronics: product type, size or capacity, features, power, voltage, energy rating, dimensions, weight, what is in the box; for Furniture: type, material, dimensions, assembly, style; and so on), the options a buyer chooses (colour, size, capacity …), warranty, delivery information and up to six photos. Required fields	Vendor dashboard → Add a listing	Admin → Marketplace

	are marked. A service provider instead gives licence, years in operation, team size, response time, availability and what is included.		
Marketplace: stock and automatic sold-out	Each listing carries a stock count. When the stock reaches zero the listing is marked Sold out by itself, and it reopens when restocked. The vendor dashboard shows a clear Active / Sold out status badge with an editable stock figure, separate from the manual 'Mark as sold out' action.	Vendor dashboard	N/A — automatic
Marketplace: orders record what was bought	An order records the quantity, the options the buyer chose (colour, size …) and the delivery address, takes stock off, and refuses more than is in stock, an option the vendor does not offer, a missing address, or a product from a vendor CHS has not verified. The buyer sees brand, specification, warranty, delivery information and stock on a details sheet before paying from the wallet.	Marketplace → View details & buy	Admin → Marketplace Moderation
Marketplace: real direct "Buy Now"	Sort by price and buy the cheapest listing directly at its own fixed price — no negotiation, no messages to moderate. Same real 6%/4% split and escrow protection.	Marketplace → Buy now	Admin → Marketplace Moderation
Sister marketplace link (Unify Market Central)	A real, admin-editable link for procurement CHS's own marketplace doesn't cover — still real, verified sellers, still under CHS's own jurisdiction.	Marketplace; Construction Roadmap; Owner → Maintenance	Admin → Overview → Edit Real Contact Details
Rental application: real applicant detail shown to owner	The owner's review card previously showed only the guarantor's name, phone, and move-in date. Now shows the applicant's real name, ID-verified status, occupation, income, employer, and current address — every field already being collected, now actually displayed.	Owner dashboard → Rental applications	N/A
Independent guarantor verification	The applicant provides only the guarantor's name and phone. The guarantor completes every other real field about themselves — address, occupation, relationship, their own ID, and their own typed-name consent — via a private, single-use link, requiring no CHS account. The application cannot reach the owner until this is done.	New applicant flow → real link sent to guarantor → /guarantor-confirm/[token]	N/A
Event Centre: real capacity tiers and priced facilities	Real, host-set price tiers by guest count, and a real priced facilities list (lighting, sound, catering per guest, live band, DJ, decoration, generator, security, parking attendants, ushers/event staff) with a live-calculated quotation as the guest selects.	Event Centre booking form	Host → Real Event Pricing (/event-pricing/[propertyId])
Event-day add-on requests	A real request for music band, caterer, and/or ushers (with a count) on any hire/event booking, visible directly on the host's own dashboard.	Hire/Event booking form	N/A
Real payment regression fixes — rent and Rent-to-Own	Both previously charged only the base amount, silently omitting the payer's own real, already-invoiced commission. Both now compute and charge the true total in one real payment, shown to the payer beforehand.	Tenant dashboard → Pay rent; Rent-to-Own installment payment	N/A
Stale, uncollected commission alert	A real, visible warning on Admin → Finance for any commission invoiced but genuinely uncollected for 2+ hours — an early warning against the exact regression pattern found and fixed above.	N/A — admin only	Admin → Finance
Clickable notifications with real navigation	A rental application's full decision chain — owner decides, CHS relays, tenant is told — now carries a real, working link at every step, straight to the relevant page.	Notification bell, any role	Notification bell
Real-time notification delivery	The notifications table is now genuinely part of Supabase's real-time publication — confirmed missing before, and the actual cause of alerts never appearing without a manual refresh. A real, visible toast now appears the instant a new notification arrives.	Any dashboard, any role	Any dashboard
My Applications	Every real rental application and purchase offer a buyer/tenant has made, queued permanently the moment they apply — no more scrolling the homepage to find it again.	/my-applications	N/A — self-service
Recent Applications (owner)	Every real application received across every property, most recent first, regardless of how far down the property list it sits.	Owner dashboard → Recent Applications	N/A — self-service
Platform Earnings	A real, dedicated view of every collected commission — payer name, amount, and timestamp.	N/A — admin only	Admin → Platform Earnings
Rent Savings relocated	Confirmed the tenant dashboard already showed this correctly; removed the redundant duplicate from the general homepage.	Tenant dashboard	N/A

15. Admin Mediation Completed, Audit Trail, Feature Explainer, and the Real Room-Video System

Feature	How it works	Where to find it (user)	Where to find it (admin)
Admin review gate: rental applications and offers, both directions	A buyer's offer, and separately an owner's accept/decline decision on that offer, previously reached the other party directly with zero CHS review. Real 'awaiting admin review' and 'owner decided, pending relay' statuses now gate both, matching the marketplace's own real pattern.	Offer submission; owner's accept/decline	Admin → Offer Review
Buyer bio-data required at offer submission	Real name, phone, occupation, and source of funds — previously an offer required none of this. Shown to admin for real verification; deliberately kept off the owner's own screen, where contact stays mediated through the real message thread instead.	Property page → Make an offer	Admin → Offer Review
Real document review at the point of listing approval	The screen where admin approves a new listing previously showed only the title and location, with zero visibility into the real uploaded legal documents. Every document now shows directly on the approval card, with its own view link and verify/reject action — and for Sale properties, the 'Verify' button is genuinely disabled, not just a warning, until every document and the owner's own ID are confirmed verified.	N/A — admin only	Admin → Properties
Category-aware bedroom display	Land and other non-residential categories no longer show a bedroom count, regardless of what any individual record's data happens to contain — a real, permanent, shared safeguard rather than a one-off data fix.	Any property listing/detail page	N/A
Real bedroom/bathroom/toilet/room dropdowns	Replacing plain number inputs with real, selectable dropdowns; a genuinely new, separate toilets count (previously conflated with bathrooms); a repeatable 'Others' facility field for anything not covered.	List a property	N/A
Processed History	A real, permanent archive of every rental application, offer, property listing, and registration CHS has ever decided on — nothing disappears once approved or rejected, the same principle as an old message staying in a real inbox.	N/A — admin only	Admin → Processed History
Audit Trail	A real, permanent, tamper-evident log — no update or delete permission exists for anyone, by design. Covers property decisions, dispute rulings, escrow fund release, account suspension, every admin relay action, referral payouts, marketplace moderation, and agent management changes. Genuinely ongoing — not yet every action in the app.	N/A — admin only	Admin → Audit Log
Feature Explainer (InfoTip)	A real, reusable, mobile-first tap/hover explainer, live on 16+ previously-confusing terms across buyer, owner, and tenant screens — commission, escrow, guarantor, CHS Agent ID, rent auto-pay, and others. Genuinely ongoing across the app's 100+ features.	Throughout the app, next to the relevant term	N/A
Property manager listing access	Managers previously could not list a property at all; agents already could. Fixed to match the identical, existing pattern — no separate database restriction ever existed, only a frontend role gate that had never included managers.	List a property	N/A
Real room-video system	A genuine, cost-free alternative to a paid virtual-tour service. Record or upload a short, real video per room on a new or existing listing; a buyer/tenant can request a specific additional video if unsatisfied, and track that request's real status. Every video plays directly on the property page.	List/edit a property; Property page → Request a video	N/A
Document Site	Every current reference document — User's Guide, Terms & Conditions, Feature Catalog, Handover Notes, Fix Tracker, Property Manager Guide, System Documentation — bundled directly into the app for one-tap download.	N/A — admin only	Admin → Document Site

16. Hotel, Lodge, Shortlet & Event-Centre Booking System (Request-First)

Feature	How it works	Where to find it (user)	Where to find it (admin)
Availability calendar for guests	Before asking to book, a guest sees every date as available (green, with ‘n left’ where a place has several rooms), requested by another guest (amber, may reopen) or booked (red, crossed out). A guest can check out on the day the next guest arrives. A banner guides the steps — tap arrival, then departure; tapping a later date extends the stay, a date inside it shortens it, and Clear dates resets. It refreshes every minute and clears chosen dates that someone else takes meanwhile, with an explanation. Guests see dates and counts only, never another guest's details. Event centres and halls use the same calendar one day at a time.	Property page → booking form — Buyer / Guest	N/A — self-service
Rooms and room types	Each hotel, lodge, shortlet or venue listing has individual rooms, grouped into types (Executive, Standard…) with an optional own nightly price and maximum guests. Hosts create rooms in bulk (type “101-112, 201, 204”). A guest picks a type and the system assigns a free room, named in My Bookings once the booking is paid.	Host dashboard → Rooms & calendar	Admin → Shortlet/Hire Bookings
Double-booking guard	Two guests can never hold the same room on the same night — enforced inside the database, so no screen, timing or shortcut can get around it. Back-to-back stays are allowed. The dates are held from the moment a request is sent, before anything else happens; if they are gone the request fails and the guest is not charged.	Automatic — every booking	Automatic
Host Rooms & Calendar console	A hotel-style chart (rooms down the side, 14 days across). The host records walk-in guests, blocks rooms, or marks every free room unavailable for a period (“Fully booked or closed”). A guest's booking or request cannot be deleted from here; a room with upcoming guests cannot be switched off. One tap — “My calendar is accurate” — confirms a listing, or all of a host's listings at once. A listing's placeholder room can be renamed to a real room number.	Host dashboard / Owner dashboard → Rooms & Calendar	Admin → Shortlet/Hire Bookings → stale-calendar alert
Calendar reminders and stale-calendar alert	Hosts receive a reminder at 7 am Nigerian time, once a day, until they confirm their calendar. Admin sees a red list of every active hotel, lodge or venue whose calendar has not been confirmed in 3+ days, with the host's phone, number of rooms and pending requests.	Host notification	Admin → Shortlet/Hire Bookings
Request-first booking order	The guest sends a request and nothing is charged; CHS relays it to the host; the host confirms the dates are free; the guest then pays within a short window; only then are the dates confirmed. The price is fixed when the request is sent. Every stage holds the dates and has a deadline; overdue stages settle themselves every 5 minutes (an unanswered or unpaid request lapses with nothing to refund; an older request paid at request time is refunded exactly).	Property page → My Bookings — Buyer / Guest	Admin → Shortlet/Hire Bookings
Urgency lanes and time limits	How long each step may take depends on how soon the stay starts (Nigerian time). Standard (more than 3 days away): CHS relays within 4 hours at most, the host has 24 hours, the guest 6 hours to pay. Soon (1–3 days): 30 minutes, 6 hours, 2 hours. Express (today): 10 minutes, 30 minutes, 20 minutes, and an expected arrival time is required. For Soon and Express the guest's wallet must already hold the full amount when the request is sent. Every figure is an adjustable setting.	Booking form + My Bookings	Platform settings (booking_*)
Instant Confirm (hotels)	A host can switch on Instant Confirm for a listing. A guest then sees Book now: they pay from their CHS wallet at once and the room is confirmed with no waiting and no admin relay. It is live only while the host's calendar has been confirmed in the last 12 hours, and never for a suspended or inactive listing; otherwise guests see the normal request flow. The host is still paid only after the guest arrives and confirms.	Host dashboard → listing → Instant Confirm; booking form → Book now	Admin is told of every instant booking
Express: ask up to 3 hotels at once (same-day stays)	For a stay starting today, the guest can ask up to 2 more hotels with a free room in the same state. CHS relays each request. The first host to confirm wins and the other requests cancel on their own, with the other hosts and the guest told. The guest pays once, for the hotel they get.	Booking form (same-day dates)	Admin → Shortlet/Hire Bookings shows the Express group
Peak pricing	CHS keeps a calendar of busy periods (Christmas and New	Host dashboard →	Admin → Hotel Controls →

	Year, Eid, Easter, Democracy Day). A host switches a period on for a listing with their own percentage and an optional minimum stay, and can add their own events. The guest sees the busy nights, the busy-period names and the full price before booking; where periods overlap, the highest uplift applies to that night.	listing → Peak pricing; booking form price breakdown	Peak periods
Host cancels a confirmed booking: consequences	The guest is refunded in full and the cancelled dates stay blocked. The host pays the bank processing fee. First cancellation in 90 days is a warning, the second costs 10 percent of the booking value (taken from the wallet and later payouts), the third suspends the listing until CHS reviews it. The host sees the consequence before confirming and must give a reason with no contact details. Admins are alerted to help the guest rebook.	Host dashboard → a confirmed booking → Cancel	Admin → Hotel Controls → cancellations and Reinstate; settings host_default_penalty_pct and host_default_window_days
Digital check-in and front desk	Once a booking is confirmed the guest gets an arrival pass with a code (XXXX-XXXX), can fill in the registration card ahead of time, and on arrival day taps I've arrived (checked against the hotel location when the host has set one, within 1 km). The front desk is told. If the host set a self check-in code, it appears only after the guest taps I've arrived. Hosts and the front-desk staff they add see today's arrivals, verify a pass, check the guest in, and record a no-show from 12:00 the day after check-in (the host is paid under the cancellation terms, the deposit goes back to the guest, the room is freed).	My Bookings (guest); Host dashboard → Front Desk (/host/arrivals); Host dashboard → Front-desk staff	Admin can view any arrivals board
Housekeeping board (hotels)	Every room shows live as occupied, to clean, ready, inspected or out of order. A room whose guest has left (after noon Nigerian time) appears as to-clean by itself. Front-desk staff tap Cleaned, Inspected or Out of order, and each change records who did it and the exact date and time.	Host dashboard → listing → Hotel operations → Housekeeping	Audit log
Repairs and maintenance tickets (hotels)	Staff log a fault against a room or the whole property with a priority; an urgent fault alerts the owner at once. A ticket moves from open to in progress to done, with the repair cost and a note, and every step carries its exact date and time.	Host dashboard → listing → Hotel operations → Repairs	Audit log
Other income centres (hotels)	Restaurant, bar, laundry, gym, events and walk-in rooms: staff record each sale with an amount and note; the entry is stamped with who and exactly when. A wrong entry is voided with a reason — it stays on the ledger, struck through, never erased.	Host dashboard → listing → Hotel operations → Money	Audit log
Expenses (hotels, owner only)	The owner records salaries, utilities, food and drink, supplies, repairs, marketing, taxes and other costs, each stamped with who and when, voidable with a reason.	Host dashboard → listing → Hotel operations → Money	Audit log
Hotel financial report and ledger (owner only)	For any date range up to a year: occupancy %, room-nights sold, average room rate (ADR), revenue per available room (RevPAR), room revenue less CHS commission, other income by centre, expenses by category, repair costs and the net result. A ledger lists every booking, income, expense and repair newest first and downloads as a CSV file.	Host dashboard → listing → Hotel operations → Money	Audit log
Guest welcome, thank-you and owner daily summary (hotels)	At check-in the guest gets a welcome notification. After check-out they get a thank-you with a request to review. Each evening (8 pm Nigerian time) the owner gets one summary: arrivals, departures, guests in-house, rooms to clean, open repairs and other income today. These are in-app alerts now; WhatsApp delivery needs a WhatsApp Business account to be connected.	Notification bell	N/A — automatic
Contact always through CHS (documents, tenants, landlords)	A buyer's delivery phone number is kept by CHS to coordinate the hand-over of sale documents; the seller never sees it, and the database refuses a direct read. Tenants and landlords likewise see no phone number for each other, only a message button.	Owner dashboard, My Rented Space, document delivery form	Admin → held funds shows the delivery contact for CHS to use
Admin relay queue	Every request comes to CHS first, in every lane — guest and host never deal directly. The queue lists requests in three groups (waiting to be relayed, with the host, waiting for the guest to pay), urgent first and in red, each with a countdown and the host's phone number. Admin relays with one tap and an optional note, or declines with a reason (the guest pays nothing). A short automatic relay remains only as a safety net	N/A	Admin → Shortlet/Hire Bookings

	if nobody acts, with an alert to admin.		
Pay-now card and live countdown	My Bookings and the Guest dashboard show where a booking stands in plain words with a live countdown. When the host confirms, a green card shows the exact amount and breakdown with a Pay now button; a wallet shortfall gives a clear message and a Top up link. An unpaid request can be withdrawn at any time at no cost. The page after sending a request says “Request sent — nothing has been charged”.	My Bookings / Guest dashboard	N/A
Arrival confirmation and prompt payout	Booking is prepaid: the guest pays first, and the host is paid when the guest ARRIVES — not after the stay. From the check-in day the guest ticks a short checklist on their booking: they have arrived and can get in, the property matches its listing, each listed facility (or each facility booked, for a venue) is present and working, and everything is in good order, with an optional message. That releases the host's payout at once and sends the message to the host and to CHS. If something is wrong the guest reports a problem instead: the money stays held and CHS and the host are alerted. If the guest says nothing, the payout is released automatically 24 hours after the 2 pm check-in time unless a problem was reported. A host whose guest has arrived can ask CHS to release; CHS sees the request, whether the guest has confirmed, and releases with one tap. Older pay-first bookings are released by CHS from its list.	My Bookings / Guest dashboard (guest); Owner & Host dashboards (host)	Admin → Shortlet/Hire Bookings → stays awaiting release
House rules for hotels, lodges, venues and hosts	Any shortlet, hotel, lodge, event-centre or other hire listing can carry a House Rules document, uploaded by the owner from the Owner dashboard or by a host from the Host dashboard. Guests must read and acknowledge it before they can send a booking request.	Owner dashboard / Host dashboard → listing → House rules; booking form (guest)	Admin → listing review
Host requests panel	A red panel at the very top of both the Owner and Host dashboards lists every request awaiting the host: the hotel, the guest's name with a CHS identity-verified mark and a CHS reference (never their phone number or ID), dates, expected arrival, what the host would receive, a countdown, and Confirm — dates are free / Decline. Urgent requests are flagged. The notification links to the right dashboard for the person's role.	Owner dashboard / Host dashboard (top)	N/A
Message review and contact-detail filter	Messages between a guest and a host are reviewed by CHS before delivery until the booking is paid (one setting keeps review on for paid bookings too); the other side cannot read an unreviewed message, even by querying the database; messages cannot be written into the table directly. Phone numbers and email addresses are refused for everyone, always. The shared filter ignores ordinary dates, times and numbers but still catches disguised numbers, and also protects offers and the marketplace.	My Bookings / Host dashboard (Messages)	Admin → Shortlet/Hire Bookings → message review
Payment, commission and payout	The guest pays before arriving; CHS holds the money only until the guest arrives and confirms. Both CHS commissions — the guest's and the host's — are recorded as collected at the moment the guest pays, as with rent and sale. The host's net payout is released the moment the guest confirms arrival (see the next entry), by admin on a host's request, or automatically 24 hours after check-in; all three go through one routine that refuses anything not actually held and pays the host the price net of CHS's commission.	Wallet / My Bookings	Admin → Escrow Oversight; Platform Earnings
Cancellation and refunds	An unpaid request is withdrawn at no cost. A paid booking cancelled 48+ hours before check-in is refunded in full (and CHS keeps no commission); within 48 hours, 50%; on or after check-in, none; a booking the host never confirmed is always refunded in full; a security deposit is always returned. The part not refunded is split: the unrefunded stay price goes to the host as compensation for the dates held (less CHS's commission on it; the host's share is a setting, default 100%) and CHS keeps its service fee on it. The guest, host and admin are each told the exact amounts, and refund + host + CHS always equals what was paid. If a host fails to honour a confirmed booking, term 36 applies instead.	My Bookings / Guest dashboard	Admin → Escrow Oversight

17. Mortgage Through CHS, Manual Final Release, Host Strikes, Digital Check-In and

Notification Bells

Feature	How it works	Where to find it (user)	Where to find it (admin)
Installments held, then released by CHS	A mortgage installment never goes straight to the owner. It is debited from the buyer, held in the owner's CHS hold with the commission rows recorded, and appears in Admin → Rent-to-Own → Payments to release. Admin releases it to the owner's wallet, singly or all at once, and each release is written to the audit log.	Buyer Mortgage page / Owner earnings	Admin → Rent-to-Own → Payments to release
Document handover for a mortgage	After the final payment the buyer asks for the documents (recipient, address, phone, method, maximum days). The owner uploads the documents for CHS to check; admin approves or asks for changes; the buyer receives the approved soft copy in the app; the owner then marks the hard copy as sent with a receipt or proof; the buyer taps I have received my documents. Every step notifies the others through CHS, and the buyer's delivery phone number is seen only by CHS.	Buyer Mortgage page / Owner dashboard (Step 1 and Step 2) / Admin	Admin → Rent-to-Own → document review and handover
Final payment released by a super admin only	The buyer confirming receipt does not move money. It marks the handover as confirmed and alerts admin; the final payment stays held until a super admin releases it. A sub-admin sees a notice instead of the button. Without owner proof or buyer confirmation, a note of at least ten characters explaining how the handover was verified is required.	Admin → Rent-to-Own	Super admin only; audited as rto_final_released
Auto-release tick box (off by default)	A box at the top of the Rent-to-Own desk. Only a super admin can tick it, after a confirmation prompt, and each change is audit-logged. When ticked, the buyer's confirmation releases the final payment immediately; when not ticked, release is manual. Meant for busy periods with many releases due at once.	Admin → Rent-to-Own	Super admin only; setting rto_final_auto_release
Reversal of a final release	A super admin can return an already released final payment to CHS hold with a written reason of at least ten characters. The money moves from the owner's wallet back into hold, the agreement returns to awaiting handover, the owner is notified and the reversal is audit-logged. It refuses if the owner has already moved the money.	Database function used by super admin	Super admin only; audited as rto_final_release_reversed
Host cancellation strikes	A host who cancels a confirmed booking that has not started must give a reason of at least ten characters without contact details. The guest is refunded in full, the dates stay blocked, and the bank fee is charged to the host. Within 90 days: strike 1 is a warning, strike 2 a 10% penalty collected from later payouts, strike 3 suspends the listing. Admin sees the strikes and can reinstate a listing with a note.	Host dashboard / Admin	Admin → host strikes and reinstate listing
Hotel digital check-in	Each confirmed booking gets an arrival code. The guest fills a registration card, taps I have arrived (checked within 1 km of the hotel when its location is set) and sees the lockbox code only on stay days, each viewing audit-logged. The front desk (host, staff the host adds by phone, or admin) uses an arrivals board to verify the pass and check the guest in, or marks a no-show from noon the day after.	Guest My Bookings / Host front desk	Admin can act as front desk
Notification bell on every dashboard	Each role's own dashboard carries its own bell, and tapping a notification opens the exact page and item it is about, even when you are already on that page.	Every dashboard	Admin feed opens the matching admin tab
Event services request (ushers, caterer, live band, security, other)	On every event-centre booking (priced-capacity form and the date-range form) the guest ticks the services they want: ushers (with a number), caterer, live band, security personnel (with a number), and a free-text line for anything else such as an MC, DJ, photographer or decoration. The request goes through CHS to the venue and is shown to the host with the booking request; nothing is charged until the venue confirms. Venues can also list priced facilities (lighting, sound, catering per guest, band, DJ, security, parking attendants, ushers) that add to the quotation.	Event-centre listing → booking form / Host booking requests	Shortlet/Hire Bookings tab (relay queue)
Full timestamps on every event	Every document, confirmation, notification, transaction, application and admin action shows its date AND time to the second in Nigerian time (WAT), using one shared formatter.	Every screen	Audit log and admin panels show the same stamps

	The Mortgage admin panel shows a handover timeline: documents requested, uploaded, approved, marked sent, buyer confirmed (with the moment CHS was alerted) and final payment released. Plain calendar dates (a lease end, a check-in day) stay as dates.		
Newest first everywhere	Chats, transactions, requests, bookings, earnings and admin lists show the newest first. Upcoming due dates and scheduled inspection dates are the deliberate exception and stay soonest first.	All dashboards	N/A

18. Hospitality Suite: Team, Plans, Import and Calendar Sync

Feature	How it works	Where to find it (user)	Where to find it (admin)
Team roles for hotel, lodge and event-centre hosts	The owner adds staff by phone number as Manager, Front desk, Housekeeping, Kitchen/bar or Accountant, and can limit each to chosen properties. Each role sees only what it needs; nobody on a team sees the owner's wallet or earnings. Changing or removing a role is recorded.	Host dashboard → My team	Audit log
Duties for staff	The owner or a manager assigns a duty to a team member with a priority and an optional due time. The person is notified, marks it done with a note, and the assigner is told. A duty can be cancelled by the owner or a manager. Every step carries the person's name and exact date and time; overdue duties show in red.	Work page; notification bell	Audit log
Shift reports	Any team member sends a morning, day, evening or night report. The owner and managers read every report; other staff see only their own. The owner is notified when one arrives.	Work page	N/A
Owner's daily summary	The evening summary now also counts overdue duties and shift reports sent today.	Notification bell	N/A — automatic
Spreadsheet import with preview and undo	Rooms and prices, income, or expenses from an Excel (.xlsx) or CSV file. Columns are matched by their headings and can be corrected; dates are read day-first; every row is checked; nothing is saved until the owner confirms. Imported rooms are switched off, and imported money entries voided, if the import is undone. Imported records keep their original date and also carry the import time.	Host dashboard → Hotel operations → Import & sync	Audit log
Two-way calendar sync (iCal)	A private calendar link per room can be pasted into Booking.com, Airbnb or Google Calendar so they see nights booked on CHS (dates only, never guest details). Calendar links from other sites can be linked into a CHS room; Sync now blocks the dates booked there and reports any that clash with an existing booking. Dates later removed from the other calendar are flagged for the owner to release. Automatic refresh is not switched on yet.	Host dashboard → Hotel operations → Import & sync	Audit log
Event day control for event centres	Each paid, confirmed event lists what the client asked for. The owner or a manager records the vendor for each service (ushers, caterer, live band, security, other) and confirms it, which tells the client the vendor's name (never the phone). A run sheet is built from what the client asked for and the team ticks tasks off; every tick records who and when. Tasks can be added, assigned to a person or skipped by the owner or a manager. On the Business plan once plans are switched on.	Host dashboard and Work page → Event day control	Audit log
Plans: Listed, Pro and Business	Listed is free. Pro and Business are paid from the CHS Wallet for 30 days and renew from the wallet until cancelled; switching up charges only the difference for the unused days. A failed renewal gives 7 days' grace, then the host moves to Listed and records stay readable and downloadable. Paid plans lower the CHS host commission by a set number of percentage points.	Host dashboard → Plans	Admin → Hotel Controls → Hospitality plans & pilot
Free pilot and master switch	The super admin grants a free pilot (limit 8 operators, 3 months) and sets plan prices and the commission cut. A master switch, off by default, decides whether Pro tools are restricted to paying hosts; while it is off every host can use every tool.	Admin → Hotel Controls → Hospitality plans & pilot	Super admin only; Audit log
Digital menu, room orders, sales, stock,	Hotels keep a menu with prices and income departments. A checked-in guest orders to their room from My Bookings; staff	Host dashboard and Work → Hotel	Not shown to admin; Pro features

recipes and assets	mark it preparing, delivered and paid (cash, transfer, POS or charged to room). A counter sales screen records restaurant and bar sales. Paid sales post to the income ledger by department, delivery deducts stock through recipes, low stock alerts the owner, and an asset register keeps each item's condition history. Guests pay the hotel directly; CHS takes no commission on this.	operations → Menu & stock; guest: My Bookings → Order to your room	(restricted only when the master switch is on)
Event quotations with a payment schedule	The venue sends the client a priced list of extra services with payment dates on or before the event; the client accepts or declines before it expires; the venue records each payment received, which adds to income. Paid directly to the venue, separate from the CHS booking payment, and CHS takes no commission on it.	Host dashboard and Work → Event day control; client: My Bookings	Not shown to admin; Business feature (restricted only when the master switch is on); Audit log
No hidden prices: complete listings only	Every listing must show the real price, location, street address, at least five photos, a video, a description and a private contact number before it can go live. The form will not submit without them and the database refuses to approve an incomplete listing. Wording such as DM, inbox or call for price is refused, including on marketplace products and services (a service must show a starting price). Price changes on live listings are shown as a price history.	List a property, Edit listing, Owner dashboard (shows what is missing), property page (price history)	Admin property review shows what is missing and risk warnings (new or unverified owner, possible duplicate, copied photos, unusual price)
30-day availability confirmation	Owners of for-sale, rent and lease listings confirm with one tap that the property is still available. A reminder goes out at 25 days and the listing is hidden from the public at 30 days until confirmed. Saving an edit also counts as confirming. Hotel, lodge and event-centre listings are kept current through their calendar.	Owner dashboard (Confirm available)	Daily scheduled task sends the reminders
Report a listing	Any signed-in person can report a listing for a hidden or wrong price, a fake or copied listing, already taken, scam behaviour or another reason. The owner is never told who reported. Admins dismiss, tell the owner to fix it, or take the listing down; the reporter is told the outcome and the action is logged.	Property page (Report this listing)	Admin → Listing reports; Audit log
Trust signals on a listing	Each live listing shows price shown upfront, whether the owner's ID is verified, the year the owner joined, how recently availability was confirmed, and its price history when the price has changed. None of it reveals who the owner is.	Property page	n/a
Copied-photo detection	When photos are uploaded to a new listing, the browser computes a short fingerprint of each photo and CHS stores the fingerprint, not the photo. A photo that closely matches one already used by a different owner, even after resizing or recompression, raises a warning for the reviewer. Listings created before this was added are not covered.	List a property (automatic)	Admin property review: warning on the listing
CHS stamp and tag ID	CHS admins award a listing one of two stamps: Managed & Advertised by CHS, or Advertised by CHS. A unique tag such as CHS-100002-3 is created automatically the first time and kept if the stamp is later removed and given back. Owners and agents cannot set or change the stamp or tag. The stamp shows as a corner label on listing cards, a banner with the tag on the listing page, and a printable sign.	Property cards, property page, Managed by CHS page	Admin → CHS stamp; Audit log
Check a CHS tag	Anyone, without logging in, types a tag from a signboard, flyer or forwarded advert and sees whether CHS issued it, whether it is still active, and which property it belongs to. A mistyped tag is recognised as a typing error. A tag that was never issued, or whose stamp was removed, is shown as not genuine, so a copied badge cannot pass.	/verify-chs and /verify-chs/(tag)	n/a
Managed by CHS search	A button on the home page and a tick box in the search panel show only CHS-stamped listings, and CHS-stamped listings are always loaded and sorted ahead of unstamped ones. The Managed by CHS page explains the stamps and lists every stamped property.	Home page, Search & filter, /chs-managed	n/a
Move-in cost breakdown	Every rent listing shows what a tenant pays to move in: rent, the CHS service fee, and any fees the lister declared, added up into one total. On a CHS-managed listing it states there is no agent, legal, RCD or inspection fee. On other listings it tells the tenant to ask for every fee in writing.	Property page (rent listings)	n/a
Printable CHS sign	For a stamped property, a printable sheet with the CHS seal, the tag, and a QR code that opens the tag check page, for signboards, flyers and status posts.	Admin → CHS stamp → Printable stamp sheet	Admin → CHS stamp

Rent by instalments	On a CHS-managed rental the owner can allow quarterly or monthly rent (full-year is always allowed). The tenant picks a plan at first payment or within 30 days of renewal, sees the schedule and pays each instalment into escrow. The management fee is taken in equal parts, reminders go out before and after each due date, and CHS does not guarantee an unpaid instalment.	Owner page (My Properties), My Rented Space, listing page cost card	Overdue instalments notify admins
Viewing time slots	An owner sets weekly viewing windows (day, hours, slot length) and dates they are away. A visitor booking an inspection then picks one free slot instead of suggesting any time. Each slot can be booked once, booked slots disappear from the list, and either side can move a visit to another free slot. Confirmed visits get reminders a day before and a few hours before. The owner sees a warning if a visitor has missed earlier visits. A property with no windows set works as before.	Owner page (My Properties), Book inspection form, My Inspections	n/a
CHS-approved agent badge	Only for registered companies and firms (CAC company, ESVARBON firm or QSRBN firm); individuals cannot hold it. The database refuses approval unless KYC is complete and under 12 months old, the firm has at least 10 income-generating transactions on CHS in the last 180 days, its registration is current, it accepted the badge terms, and a CHS officer ticked eight manual checks (ID/NIN/face match, address, directors' KYC, register check, office, two references, adverse record, fee conduct). Valid 12 months; it hides itself on lapse, expired registration, stale KYC or suspension, and admins can remove it with a reason. Anyone can check an agent ID without logging in.	Agent dashboard (application), Admin > CHS stamp, property page strip, /verify-agent	Admin > CHS stamp > CHS-approved agent badge
Owner at-a-glance summary	At the top of the owner dashboard, one card across all of an owner's properties: what needs them (past visits to mark, overdue instalments, applications, offers, questions, visits this week, tenancies ending, notices), the money (wallet, escrow, rent awaiting release, rent released in the last 30 days, annual rent under lease) and a row per property, busiest first. Read-only, from one database call.	Owner dashboard (top)	n/a
Ask CHS to manage this property	On each of their properties an owner can press Ask CHS to manage this property, choose rent, shortlet, sale and/or hotel or commercial, say in what capacity they act, upload the required documents, read the full terms (scroll to the end), answer three short questions, and tick to accept. The request goes to CHS. The owner can withdraw it while pending, and can later ask CHS to stop managing the property.	My Properties (owner)	Admin → CHS stamp (top of page)
Approve CHS management and stamp	Admin sees each request with the owner's ID status, capacity, uploaded documents, purposes, fees shown and the time the terms were accepted. Approval needs a tick that the documents were checked, and for a hotel the agreed base fee, incentive fee and term. Approve turns on the Managed & Advertised by CHS stamp and issues the tag (the listing must be verified first). Decline needs a reason. When an arrangement ends, one button removes the stamp. The owner is told each time and every action is audit-logged.	Admin → CHS stamp	Admin → CHS stamp; Audit log
Management fee replaces the owner-side fee	On a CHS-managed rent listing the owner pays the 10% management fee instead of the standard 4% owner-side fee; on a CHS-managed sale the seller pays the tiered sale-negotiation fee (8% down to 3%) instead of 6%. Tenant and buyer fees are unchanged. The owner's earnings screen shows the fee that applies. Renewal-year commission and host-side shortlet and hotel booking commission are not yet adjusted in code; the terms promise a credit on the statement.	Owner earnings, tenancy approval, sale commission	Platform settings: managed_rent_fee_pct, managed_rent_fee_min

19. Venues, Hotels, Groups, Open Grounds and VAT (October 2026)

Feature	How it works	Where to find it (user)	Where to find it (admin)
Event-centre advance (60%)	After the guest pays, CHS holds the money. About 48 hours before the event it releases an advance (default 60%, 0 = off, never above 90%) of what the venue will earn (booking price less the venue's service charge) to the venue's wallet. The balance is released after the event. Settings: event_advance_pct and event_advance_release_hours.	Host wallet; Host console	Admin → Event Centres → Release advance now (pays it early)

Advance on event services	Each service the guest buys for an event (ushers, catering, band, security) pays the venue, or the provider CHS found, an advance before the event and the balance after. Services paid after the hall advance get their advance straight away.	Host console; guest booking	Admin → Service sourcing → payouts (advance and balance buttons for CHS-sourced providers)
Advance clawback on cancellation	If an event is cancelled or refunded after an advance was paid, the advance is taken back from the venue's wallet before the guest's refund is worked out. Any shortfall is recorded as owed to CHS and admin is alerted.	Automatic	Admin → Event Centres (recover-due shown)
Event risk class	Each event is marked routine, managed or enhanced from its type (for example concerts, festivals, political events) and size (200+ and 1,000+ guests) so staff know which need a closer look.	Not shown to guests	Admin → Event Centres (badge)
Event booking documents	The organiser attaches documents (permit, police clearance, ID, programme) to an event booking, up to 20, stored privately. Only the organiser, the venue and admin can open them, through a short-lived link. A removed document is hidden, not erased.	Booking → Documents (guest); Host console (venue)	Admin → Event Centres (document count)
Licensed capacity	A venue states its licensed capacity; admin verifies it against the operating permit (changing it clears the verification). A booking for more guests than the capacity is refused by the database and the booking form.	Event pricing page; booking form	Admin → Event Centres → verify capacity
Venue profile	Parking spaces, power backup and fire-safety notes, shown to guests before they book. Contact details are refused.	Event pricing page; booking form	N/A
Seating layouts and diagrams	The venue lists the layouts it can set up (banquet, theatre, classroom, U-shape, standing, boardroom) and may set the most guests each holds. The guest picks one from small diagrams under Services and changes; one too small for the guest count is greyed out and refused. The venue is notified and sees the choice.	Venue profile; Services and changes; Host console	N/A
Several rooms in one request	A guest chooses the number of rooms, adults and children. Each room is its own booking, linked as a room group; the host confirms them and the guest sees 'Room 2 of 3'.	Booking form; Bookings	Admin → Hotels & Lodges (live)
Pay all rooms at once	Pays every awaiting room of a linked group in one step after checking the wallet covers the total.	My bookings	N/A
Hotel stay extras	Breakfast, half board, full board, extra bed, airport pickup, laundry, early check-in, late check-out, cleaning and baby cot are requested through CHS; the host answers with a price and the guest pays through CHS.	Extras and changes	Admin → Service sourcing
Public rating summary	A property page shows its average and number of ratings. A guest can rate only after the stay has started, and a rating with contact details is refused.	Property page	N/A
Search by dates	Pick check-in and check-out on the home page; only hotels, lodges and shortlets free on every night are shown.	Home page	N/A
Accessibility filter and tags	Hosts tick accessibility features when listing (for example step-free access); guests filter on them.	List property; Home page	N/A
Weekly and monthly discounts	A host offers a weekly discount (7+ nights) and a monthly discount (28+ nights), up to 50%. The price shows the gross, the discount line and the discounted total; CHS's fees are worked out on the discounted price.	Host page → Stay offers; booking form	N/A
Group and corporate enquiries	A guest sends a group enquiry (name, organisation, guests, rooms, dates, purpose, message) to the host through CHS. Contact details are refused and five a day is the limit. The host reads them under Stay offers.	Property and hotel pages; Host page	N/A
Open fields and stadiums	New hire categories with a ground-details profile: surface, floodlights, toilets, changing rooms, safe crowd limit, rain plan, noise or curfew rules, safety notes. Guests see it on the property page.	List property; Host page; Property page; Guest page tabs	N/A
VAT recording on CHS fees	OFF by default. When a super admin switches it on (a tax ID is required), VAT is treated as included in each CHS fee collected: guest and host amounts do not change. Each fee gets a ledger entry with its VAT part; a refund reverses it. Monthly report with CSV: fees collected, VAT to remit, fee excluding VAT, VAT reversed. Fees collected before the switch are not back-filled. Not a tax filing; the accountant confirms rate and registration.	N/A	Admin → Financial → VAT on CHS fees
